

# **Promoting Viral Suppression Among Transgender Women Living With HIV in Santo Domingo**

**NCT number** NCT06316102  
**Document Date** 03/24/2026

#### Analysis:

We will report measure outcomes at midline and endline data collection. For each outcome measure, we will report counts for dichotomous measures and mean for continuous measures. For dichotomous measures, we will use a chi-square test to examine if there are statistically significant differences between the two groups ( $p < 0.05$ ). If at least one expected cell count is less than 5, we will use Fisher's exact test. For continuous measures, we will use a t-test to examine if there are statistically significant differences between the two groups ( $p < 0.05$ ). For non-normally distributed data, we will use the Wilcoxon signed-rank test.
