- This study involves research using medical records/biologicial specimens obtained from previous routine clinical care: ☑ Yes, □ No
- This study meets the permission conditions of the original informed consent: ☑ Yes, □ No
- The previous study had obtained written informed consent from subjects, allowing other research projects to use their medical records or specimens: ☑ Yes, □ No
- Will this study use medical records or specimens from subjects who have previously explicitly refused their use in future research? □ Yes, ☑ No
- The research purpose is important: ☑ Yes, □ No
- The research involves no more than minimal risk to subjects (meaning no greater risk than that associated with basic procedures in routine clinical care, such as catheterization or blood sampling): ☑ Yes, □ No
- The waiver of informed consent will not adversely affect the rights and health of subjects: ☑ Yes, □ No
- Subjects' privacy and personal identifying information will be protected: ☑ Yes, □ No
- The research could not be practically carried out if informed consent were required: ☑ Yes, □ No
- Does the protocol specify the scope of personnel authorized to access subjects' personal data (including medical records and biological specimens)? ☑ Yes, □ No
- Does the protocol include data security measures (e.g., data anonymization) to protect the confidentiality of subjects' data? ☑ Yes, □ No
- Does the protocol stipulate that negative results will be published openly to the same extent as positive results, and that the publication of research findings will not disclose subjects' personal information? ☑ Yes, □ No
