Statistical Analysis Plan

Statistical Analysis Plan

I will calculate means and standard deviations for all self-report measures. I will analyze the data. Semi-structured interview recordings will be transcribed verbatim by a professional transcription company, Rev.com. Along with two trained research assistants, I will follow Braun and Clarke's six-phase approach to thematic data analysis.⁶⁴ First, becoming familiar with the data, then generating initial codes, searching for themes, reviewing themes, defining and naming themes, and finally, producing a report. We will use NVivo software to organize data when coding transcripts.
