Study Title: Does the Transversus Abdominis Plane (TAP) Block Effectively Manage Pain After Laparoscopic Cholecystectomy? A Randomised Controlled Trial

Principal Investigator: Dr. Syeda Zarreen Raza
Hospital: JPMC
Contact Number: 03310324008

You are requested to participate in this research study because you are scheduled for laparoscopic cholecystectomy. The purpose of this study is to evaluate whether a Transversus Abdominis Plane (TAP) block improves pain control after surgery. If you agree to participate, your surgery will be performed as planned. You will be randomly assigned to receive either a TAP block or standard pain management. Your pain scores, medication use, and recovery details will be recorded during your hospital stay and follow-up period.

Possible risks include bruising at the injection site, minor bleeding, infection, allergic reaction to local anaesthetic, or failure of the block, although these are uncommon. There will be no additional cost to you and no compensation, as participation will not incur any extra expenses. Your participation is entirely voluntary and you may withdraw at any time without affecting your treatment or relationship with your doctors. All personal information will remain confidential and will be used only for research purposes.

I have read and understood the information provided. I voluntarily agree to participate in this study.
