

# The Ohio State University Combined Consent to Participate in Research and HIPAA Research Authorization

**Study Title:** Re-Defining Frailty and Improving Outcomes Through  
Prehabilitation (RIOT Trial)

**Principal Investigator:** Aslam Ejaz, MD

**Sponsor:** The Ohio State University

- **This is a consent form for research participation.** It contains important information about this study and what to expect if you decide to participate. Please consider the information carefully. Feel free to discuss the study with your friends and family and to ask questions before making your decision whether or not to participate.
- **Your participation is voluntary.** You may refuse to participate in this study. If you decide to take part in the study, you may leave the study at any time. No matter what decision you make, there will be no penalty to you and you will not lose any of your usual benefits. Your decision will not affect your future relationship with The Ohio State University. If you are a student or employee at Ohio State, your decision will not affect your grades or employment status.
- **You may or may not benefit as a result of participating in this study.** Also, as explained below, your participation may result in unintended or harmful effects for you that may be minor or may be serious depending on the nature of the research.
- **You will be provided with any new information that develops during the study that may affect your decision whether or not to continue to participate.** If you decide to participate, you will be asked to sign this form and will receive a copy of the form. You are being asked to consider participating in this study for the reasons explained below.

## Key Information About This Study

The following is a short summary to help you decide whether or not to be a part of this study. More detailed information is listed later in this form.

This study is looking at a cancer patient's health before surgery, and if simple guided physical exercise before surgery will help to lower your risks and better your healing leading up to and following surgery.

If you participate / if chosen for the exercise group, before surgery you may have your blood drawn, be given simple exercises to do, and have possible follow up phone visits. There will be surveys to complete at appointments or through email after surgery for all that join. There may also be a blood draw the day of surgery, and at your 1<sup>st</sup> first visit after surgery. We may

36 also save some tissue samples from the pieces removed by your surgeon. Alternatively, if you  
37 participate, but are not chosen for the exercise group, you will still receive standard of care  
38 instructions, complete surveys and may have your blood drawn at the same time points, and  
39 again have tissues saved. The study lasts about 1 year.

40

## 41 1. Why is this study being done?

42 In an aging population, a pre-surgical (before surgery) risk check is done to decide if your  
43 cancer can be removed. Surgery provides the best hope for long-term survival among patients  
44 with abdominal/belly cancers (ex: localized pancreatic, liver, or gastric cancer -where the  
45 cancer is only in that organ). However, many of the patients who may have their pancreas,  
46 liver, or stomach removed will have problems after surgery. Though chemotherapy after  
47 surgery improves cancer-specific survival, many of patients who undergo abdominal cancer  
48 surgery will not receive any treatment due to the failure to heal from the surgery or surgery-  
49 related problems.

50

51 The usual way to check surgical risk is age and current diseases. This is not always accurate.  
52 Recently, the idea of frailty has been introduced as a better way to check for risk. Frailty is  
53 usually described as weakness related to aging, as well as illness and the ability to handle  
54 normal every day stress. Prehabilitation programs, or exercise programs before surgery, try to  
55 improve the medical and physical state of patients before surgery. This has not been well  
56 studied in people going through cancer surgery.

57

## 58 2. How many people will take part in this study?

59 144 total (2 groups with 72 in each group)

60

## 61 3. What will happen if I take part in this study?

62 If you take part in the study, you will be given a study number, simple physical tests (like  
63 walking speed/6 minute walk, grip strength, timed up and go “TUG”), a few questions about  
64 your daily activities (Katz Index of Independence), feelings (CES-D), memory (mini-Cog), a  
65 quality of life questionnaire, as well as a short frailty survey to complete – these are a part of  
66 research.

67 A computer program will randomly, like flipping a coin, select if you will be in the no  
68 prehabilitation group or prehabilitation group. Prehabilitation, or prehab, is to help get  
69 stronger before an event, like surgery. (See Schedule of Activities on pg 4) The other group  
70 will be in the study as a non-prehab group, which means, not doing specific exercises before  
71 surgery, but continuing their daily activities as usual.

72 For those subjects in the non-prehab group, with no assigned exercises, you will receive pre-  
73 surgical information from your provider. For those randomized into the prehabilitation group,  
74 you will talk with a physical therapist. This is an expert in helping people that have limited

80 activity or movement in their lives. They will give you low or moderate-high intensity home  
81 exercises to work on. These will be done at home during the time before your surgery, but  
82 you will have contact with a study team member for any questions. Some people may have  
83 trouble completing all the exercises at first, but we are hopeful that the more you try, the more  
84 you will be able to finish.

85  
86 If assigned to the prehab group, the time at home (20-50 mins for 2-3 days/week) before your  
87 date for surgery, you will be doing the simple exercises given to you at the physical therapy  
88 session, and marking them on the exercise diary provided by physical therapy, in addition to  
89 any instructions provided by your care team. This one-time physical therapy session may take  
90 about 45 – 60 mins. A research team member will call you each week to check in on your  
91 progress and answer any questions you may have about the study. Those in the other group  
92 will follow any instructions as given by their care team only.

93  
94 All enrolled subjects will have their blood drawn. Approximately 30cc or 1 tablespoon of  
95 blood may be drawn during your visit 0 (see below). This blood will be processed and stored  
96 until the end of the study, here at Ohio State, with your study number on it.

97  
98 The day of surgery, blood may be drawn when other routine labs are drawn for all enrolled  
99 subjects as a part of the study. Also, a very small amount of your tissues, if not needed by  
100 pathology, will be taken. This is from the tissues already removed as a part of your surgery.

101  
102 After surgery, all subjects will be scheduled to follow-up as part of your routine clinic care  
103 with your doctor. At this time as a part of this study, you will be asked to complete a quality  
104 of life questionnaire, and may have your blood drawn. If you were assigned the prehab group,  
105 you ~~will~~ can return the exercise diary on the day of surgery, at one of your post-operative  
106 appointments or with the stamped, addressed envelope provided to you.

107  
108 A study team member will review and collect medical information from all enrolled subjects,  
109 for basic information such as height, weight, type of surgery, complications, for example, but  
110 subjects will be identified by a study ID number.

90-day morbidity assessed via Comprehensive Complication Index (CCI)						X			
AE Assessment			X <sup>1</sup>		X	X	X	X	X

131

1 -only if assigned to exercise

132

Prehab check-in at Phone visit – Follow-up on exercises, questions, AEs

133

134 AE – adverse event

135

Post-op, post-operative/after surgery

136

Note: 90-day Morbidity = 3 month review of health status with a trusted guide

137

138

If you do not end up having surgery, you will be withdrawn from the study, and will be asked to complete the quality of life survey (PROMIS).

139

140

141

**4. How long will I be in the study?**

142  
143     Approximately 12 months for the entire study, however the exercise program (if you are  
144     in that group) will only be during the time between the first session with physical therapy  
145     and the day of your surgery. This could be about 2-4 weeks, but may vary depending on  
146     the date of your surgery.

147  
148     **5. Can I stop being in the study?**

149  
150     You may leave the study at any time. If you decide to stop participating in the study,  
151     there will be no penalty to you, and you will not lose any benefits to which you are  
152     otherwise entitled. Your decision will not affect your future relationship with The Ohio  
153     State University.

154  
155     **6. What risks, side effects or discomforts can I expect from being in the study?**

156  
157     With any exercise therapy program, there are slight risks including pulling or straining  
158     muscles, muscle soreness, shortness of breath, muscle tightness in your legs, arms, or  
159     abdomen, and in very rare cases dizziness or lightheadedness.

160  
161     The doctor or study staff will take blood from a blood vessel in your arm by inserting a  
162     small needle. Possible side effects of taking blood this way may include tenderness, pain,  
163     and bruising at the site where the needle entered the arm, but this will be gone in a few  
164     days. Infection, lightheadedness, or fainting is rare.

165  
166     There is a potential risk to your privacy. Every effort will be made to maintain your  
167     privacy, however this cannot be guaranteed.

168  
169     **7. What benefits can I expect from being in the study?**

170  
171     You may or may not benefit from participating in this study. It is possible that exercise  
172     therapy, and the education may result in fewer complications following surgery. It is  
173     expected that this research will help others in the future.

174  
175     **8. What other choices do I have if I do not take part in the study?**

176  
177     You may choose not to participate without penalty or loss of benefits to which you are  
178     otherwise entitled.

179  
180     **9. What are the costs of taking part in this study?**

181  
182     There is no cost for being in the study.

183  
184     **10. Will I be paid for taking part in this study?**

186 You will not be paid for being in the study.  
187

188 **11. What happens if I am injured because I took part in this study?**

189  
190 If you suffer an injury from participating in this study, you should notify the researcher or  
191 study doctor immediately, who will determine if you should obtain medical treatment at  
192 The Ohio State University Wexner Medical Center.  
193

194 The cost for this treatment will be billed to you or your medical or hospital insurance. The  
195 Ohio State University has no funds set aside for the payment of health care expenses for  
196 this study.  
197

198 **12. What are my rights if I take part in this study?**

199  
200 If you choose to participate in the study, you may discontinue participation at any time  
201 without penalty or loss of benefits. By signing this form, you do not give up any personal  
202 legal rights you may have as a participant in this study.  
203

204 You will be provided with any new information that develops during the course of the  
205 research that may affect your decision whether or not to continue participation in the  
206 study.  
207

208 You may refuse to participate in this study without penalty or loss of benefits to which  
209 you are otherwise entitled.  
210

211 An Institutional Review Board responsible for human subjects research at The Ohio State  
212 University reviewed this research project and found it to be acceptable, according to  
213 applicable state and federal regulations and University policies designed to protect the  
214 rights and welfare of research participants.  
215

216 **13. Will my de-identified information and bio-specimens be used or shared for  
217 future research?**

218 Yes, they may be used or shared with other researchers without your additional informed  
219 consent.  
220

221 **14. Will my study-related information be kept confidential?**

222 Efforts will be made to keep your study-related information confidential. However, there  
223 may be circumstances where this information must be released. For example, personal  
224 information regarding your participation in this study may be disclosed if required by state  
225 law.  
226

227 Also, your records may be reviewed by the following groups:  
228

- Office for Human Research Protections or other federal, state, or international regulatory agencies;
- U.S. Food and Drug Administration;
- The Ohio State University Institutional Review Board or Office of Responsible Research Practices;
- The sponsor supporting the study, their agents or study monitors; and
- Your insurance company (if charges are billed to insurance).

If we find information that significantly impacts your health, we will share it with you, at your next appointment with your physician.

We will work to make sure that no one sees your survey responses without approval. But, because we are using the Internet, there is a chance that someone could access your online responses without permission. In some cases, this information could be used to identify you. Your data will be protected with a code to reduce the risk that other people can view the responses.

## **15. HIPAA AUTHORIZATION TO USE AND DISCLOSE INFORMATION FOR RESEARCH PURPOSES**

### **I. What information may be used and given to others?**

- Past and present medical records;
- Research records;
- Records about phone calls made as part of this research;
- Records about your study visits;
- Information that includes personal identifiers, such as your name, or a number associated with you as an individual;
- Information gathered for this research about:
  - Physical exams
  - Laboratory, x-ray, and other test results
  - Diaries and questionnaires

### **II. Who may use and give out information about you?**

Researchers and study staff.

### **III. Who might get this information?**

- The sponsor of this research. “Sponsor” means any persons or companies that are:
  - working for or with the sponsor; or
  - owned by the sponsor.

273        • Authorized Ohio State University staff not involved in the study may be aware that  
274        you are participating in a research study and have access to your information;  
275        • If this study is related to your medical care, your study-related information may be  
276        placed in your permanent hospital, clinic, or physician's office record;  
277

278        **IV. Your information may be given to:**

280        • The U.S. Food and Drug Administration (FDA), Department of Health and Human  
281        Services (DHHS) agencies, and other federal and state entities;  
282        • Governmental agencies in other countries;  
283        • Governmental agencies to whom certain diseases (reportable diseases) must be  
284        reported; and  
285        • The Ohio State University units involved in managing and approving the research  
286        study including the Office of Research and the Office of Responsible Research  
287        Practices.

288        **V. Why will this information be used and/or given to others?**

291        • To do the research;  
292        • To study the results; and  
293        • To make sure that the research was done right.

294        **VI. When will my permission end?**

297        There is no date at which your permission ends. Your information will be used  
298        indefinitely. This is because the information used and created during the study may be  
299        analyzed for many years, and it is not possible to know when this will be complete.

301        **VII. May I withdraw or revoke (cancel) my permission?**

303        Yes. Your authorization will be good for the time period indicated above unless you  
304        change your mind and revoke it in writing. You may withdraw or take away your  
305        permission to use and disclose your health information at any time. You do this by  
306        sending written notice to the researchers. If you withdraw your permission, you will not  
307        be able to stay in this study. When you withdraw your permission, no new health  
308        information identifying you will be gathered after that date. Information that has already  
309        been gathered may still be used and given to others.

311        **VIII. What if I decide not to give permission to use and give out my health  
312        information?**

314 Then you will not be able to be in this research study and receive research-related  
315 treatment. However, if you are being treated as a patient here, you will still be able to  
316 receive care.

317

**318 IX. Is my health information protected after it has been given to others?**

319

320 There is a risk that your information will be given to others without your permission. Any  
321 information that is shared may no longer be protected by federal privacy rules.

322

**323 X. May I review or copy my information?**

324

325 Signing this authorization also means that you may not be able to see or copy your study-  
326 related information until the study is completed.

327

328

**329 16. Who can answer my questions about the study?**

330

331 For questions, concerns, or complaints about the study, or if you feel you have been  
332 harmed as a result of study participation, you may contact Aslam Ejaz, MD, MPH at (614)  
333 614-293-7171.

334

335 For questions related to your privacy rights under HIPAA or related to this research  
336 authorization, please The Ohio State University Medical Center Privacy office at (614)  
337 293-4477.

338

339 For questions about your rights as a participant in this study or to discuss other study-  
340 related concerns or complaints with someone who is not part of the research team, you  
341 may contact the Office of Responsible Research Practices at 1-800-678-6251.

342

343 If you are injured as a result of participating in this study or for questions about a study-  
344 related injury, you may contact Aslam Ejaz, MD, MPH at (614) 614-293-7171.

345

346

**347 Signing the consent form**

**348**  
**349** I have read (or someone has read to me) this form and I am aware that I am being asked to  
**350** participate in a research study. I have had the opportunity to ask questions and have had them  
**351** answered to my satisfaction. I voluntarily agree to participate in this study.

**352**  
**353** I am not giving up any legal rights by signing this form. I will be given a copy of this  
**354** combined consent and HIPAA research authorization form.

**355**
