

Research Progress Report

Title: A Multicenter Observational Study on the
Development and Health Effects of Premature Ovarian
Insufficiency (POI)

NCT: 06067529

Date: November 18, 2024

A Multicenter Observational Study on the Development and Health Effects of Premature Ovarian Insufficiency (POI)

This study has successfully held a project kick-off meeting, with participants including the project leaders, project implementation personnel, leaders of each sub-center, and their respective implementation staff. During the meeting, the research plan, technical route, questionnaire, informed consent form, personnel assignments, and specific project implementation plan were all unanimously approved. The meeting also conducted project training for the staff of each sub-center.

Subsequently, the project leading unit and each sub-center carried out the project vigorously. The enrolled patients came from various cities in Zhejiang Province, China. As of November 2024, a total of 390 participants have been successfully recruited, and the overall research progress is reliable. No situations affecting the conduct of this study have occurred, and there have been no unexpected, serious adverse events related to the trial interventions. There are no issues affecting the rights and interests of the participants.
