Title: A Prospective Study of Evaluation of Operative Duration as a Predictor of Mortality in Pediatric Emergency Surgery: Concept of 100 Minutes Laparotomy in Resource-limited Setting

NCT Identifier Number: Not assigned

Document Date: 31/03/2017

Informed Consent for Participation in Study

My child was brought by me in the casualty of JN Medical College and Hospital on date _____. He/she was managed appropriately and in timely manner to the best of my knowledge. He/she was then operated under my due informed consent in the emergency operation theatre of the hospital by Dr Kaushal Deep Singh. The effect and nature of operation and anaesthesia and associated risks were explained to me by the above mentioned operating surgeon. I was told about this study which is being undertaken at the hospital and strongly believe that this is not a trial and error experiment; rather a manner of scientific and appropriate gathering of data being done to improve final patient outcome. I agree to get my ward to be part of this study at Jawaharlal Nehru Medical College, Aligarh Muslim University, Aligarh.
