

**Comparative Effectiveness of Tirzepatide versus Semaglutide in
Individuals with Heart Failure with Preserved Ejection Fraction**

NCT06914141

14th April 2025

1. Title Page

Title	Comparative Effectiveness of Tirzepatide vs Semaglutide in Individuals with Heart Failure with Preserved Ejection Fraction
Research question & Objectives	The aim of this study is to assess the comparative effectiveness of tirzepatide vs semaglutide on all-cause mortality or heart failure hospitalization among individuals with heart failure with preserved ejection fraction.
Protocol version	Version 1
Last update date	February 14, 2025
Contributors	Primary investigators contact information: Dr. Nils Krüger, nkruger1@bwh.harvard.edu Dr. Shirley Wang, swang1@bwh.harvard.edu Contributor names: Dr. Krüger implemented the study design in the Aetion Evidence Platform. He is responsible for the validity of the design and analytic choices. All implementation steps are recorded and the implementation history is archived in the platform.
Study registration	Site: ClinicalTrials.gov Identifier: NCT06914141
Sponsor	Organization: N/A Contact: N/A
Conflict of interest	Dr. Krüger has no conflict of interest. Dr. Wang has consulted for Cytel Inc, Exponent Inc, and MITRE an FFRDC for Centers for Medicare and Medicaid for unrelated work.

2. Abstract

This is a non-randomized, non-interventional study that is part of the *Randomized Controlled Trials Duplicated Using Prospective Longitudinal Insurance Claims: Applying Techniques of Epidemiology* (RCT-DUPLICATE) initiative (www.rctduplicate.org) of the Brigham and Women's Hospital, Harvard Medical School. It is intended to assess the comparative effectiveness of tirzepatide vs semaglutide after emulating the pivotal RCTs of each drug used to support regulatory approval in heart failure with preserved ejection fraction (SUMMIT and STEP-HFpEF DM trials).^{1,2} This comparative effectiveness target trial described below draws from eligibility criteria from the SUMMIT and STEP-HFpEF DM trials. Although many features of the target trial cannot be directly replicated in healthcare claims, key design features, including outcomes, exposures, and inclusion/exclusion criteria, were selected to proxy those features from the target trial. Randomization cannot be achieved in healthcare claims data but was proxied through a statistical balancing of measured covariates according to standard practice.

The database study will be a new-user active-comparative study, conducted using 2 national United States claims databases, where we compare the effect of tirzepatide vs semaglutide on the composite end point of all-cause mortality or heart failure hospitalization. Clinical guidelines during the study period recommended both agents for the same indications of glucose lowering and weight reduction. Indication for heart failure with preserved ejection fraction has not been granted for both drugs during the study period.

The study will use two data sources: Optum Clinformatics and Merative Marketscan.
Optum: Study period between May 13, 2022 to November 30, 2024.
Marketscan: Study period between May 13, 2022 to December 31, 2023.

3. Amendments and updates

Version date	Version number	Section of protocol	Amendment or update	Reason

4. Rationale and background

The purpose of this protocol is to specify the target trial assessing the comparative effectiveness of the dual dual glucose-dependent insulintropic polypeptide (GIP) and glucagon-like peptide-1 receptor agonist (GLP-1-RA) tirzepatide vs the GLP-1-RA semaglutide on the composite end point of all-cause mortality or heart failure hospitalization in patients with heart failure with preserved ejection fraction.

Injectable semaglutide became available on December 5, 2017 under the brand name Ozempic.³ On January 16, 2020, the approval was expanded to include cardiovascular risk reduction in adults with type 2 diabetes mellitus and known heart disease. On March 28, 2022, Novo Nordisk received FDA approval for a higher-dose semaglutide (2 mg) to provide improved glycemic control for adults with type 2 diabetes mellitus. Meanwhile, semaglutide received its first FDA approval for the treatment of obesity in adults under the brand name Wegovy on June 4, 2021. On December 23, 2022, the approval was extended to include teenagers aged 12 and older. Later, on March 8, 2024, Wegovy was additionally approved for cardiovascular risk reduction in people with overweight or obesity and established cardiovascular disease. Most recently, on January 28, 2025, Ozempic became the first and only GLP-1-RA approved to reduce the risk of worsening kidney disease and cardiovascular death in adults with Type 2 diabetes and chronic kidney disease.

The GIP/GLP-1-RA tirzepatide became available on May 13, 2022, when it was approved to treat type 2 diabetes mellitus.⁴ A year later, on November 8, 2023 tirzepatide was approved for chronic weight management in adults with obesity or overweight who also have at least one weight-related comorbid condition, such as hypertension, dyslipidemia, type 2 diabetes mellitus, obstructive sleep apnea, or cardiovascular disease. Later on, on December 20, 2024, tirzepatide was approved to treat moderate to severe obstructive sleep apnea (OSA) in adults with obesity, to be used in combination with a reduced-calorie diet and increased physical activity.

5. Research question and objectives

Table 2. Primary and secondary research questions and objectives

A. Primary research question and objective

Objective:	To evaluate the comparative effect of tirzepatide vs semaglutide on all-cause mortality or heart failure hospitalization in patients with heart failure with preserved ejection fraction.
Hypothesis:	We hypothesize that tirzepatide will be non-inferior to semaglutide in individuals with heart failure with preserved ejection fraction at preventing all-cause mortality or heart failure hospitalization.

Population (mention key inclusion-exclusion criteria):	Individuals aged 18 years or older with heart failure with preserved ejection fraction.
Exposure:	Tirzepatide.
Comparator:	Semaglutide.
Outcome:	Composite of all-cause mortality or heart failure hospitalization.
Time (when follow up begins and ends):	1 day after cohort entry date until the first of outcome, disenrollment, end of study period, discontinuation (45 days grace and risk window), switch between the arms, start of any other GLP-1-RA.
Setting:	The outcome will be measured from inpatient hospitalizations and death.
Main measure of effect:	Hazard ratio.

B. Secondary research questions and objectives

Objective:	To evaluate the comparative effect of tirzepatide vs semaglutide on all-cause mortality or worsening heart failure events in patients with heart failure with preserved ejection fraction.
Hypothesis:	We hypothesize that tirzepatide will be non-inferior to semaglutide in individuals with heart failure with preserved ejection fraction at preventing all-cause mortality or worsening heart failure events.
Population (mention key inclusion-exclusion criteria):	Individuals aged 18 years or older with heart failure with preserved ejection fraction.
Exposure:	Tirzepatide.
Comparator:	Semaglutide.
Outcome:	Composite of all-cause mortality or a worsening heart failure event (exacerbated symptoms of heart failure resulting in hospitalization, intravenous diuretic therapy in an urgent care setting), and its respective individual end points.
Time (when follow-up begins and ends):	1 day after cohort entry date until the first of outcome, disenrollment, end of study period, discontinuation (45 days grace and risk window), switch between the arms, start of any other GLP-1-RA.
Setting:	The outcome will be measured from inpatient hospitalizations, intravenous diuretic therapy in an outpatient setting, and death.
Main measure of effect:	Hazard ratio.

Objective:	To evaluate the comparative effect of tirzepatide vs semaglutide on the safety outcome of urinary tract infections.
Hypothesis:	We hypothesize that tirzepatide will not have a different effect from semaglutide.

Population (mention key inclusion-exclusion criteria):	Individuals aged 40 years or older with heart failure with preserved ejection fraction.
Exposure:	Tirzepatide.
Comparator:	Semaglutide.
Outcome:	Urinary tract infections.
Time (when follow-up begins and ends):	1 day after cohort entry date until the first of outcome, disenrollment, end of study period, discontinuation (45 days grace and risk window), switch between the arms, start of any other GLP-1-RA.
Setting:	The outcome will be measured using diagnosis codes in an inpatient or outpatient setting that are followed by a antibiotic prescription within 7 days of the diagnosis code.
Main measure of effect:	Hazard ratio.

Objective:	To evaluate the comparative effect of tirzepatide vs semaglutide on the safety outcome of serious bacterial infections.
Hypothesis:	We hypothesize that tirzepatide will not have a different effect from semaglutide.
Population (mention key inclusion-exclusion criteria):	Individuals aged 40 years or older with heart failure with preserved ejection fraction.
Exposure:	Tirzepatide.
Comparator:	Semaglutide.
Outcome:	Serious bacterial infections.
Time (when follow-up begins and ends):	1 day after cohort entry date until the first of outcome, disenrollment, end of study period, discontinuation (45 days grace and risk window), switch between the arms, start of any other GLP-1-RA.
Setting:	The outcome will be measured using primary diagnosis codes in an inpatient setting.
Main measure of effect:	Hazard ratio.

Objective:	To evaluate the comparative effect of tirzepatide vs semaglutide on the safety outcome of gastrointestinal adverse events.
Hypothesis:	We hypothesize that tirzepatide will not have a different effect from semaglutide.
Population (mention key inclusion-exclusion criteria):	Individuals aged 40 years or older with heart failure with preserved ejection fraction.
Exposure:	Tirzepatide.
Comparator:	Semaglutide.

Outcome:	Gastrointestinal adverse events.
Time (when follow-up begins and ends):	1 day after cohort entry date until the first of outcome, disenrollment, end of study period, discontinuation (45 days grace and risk window), switch between the arms, start of any other GLP-1-RA.
Setting:	The outcome will be measured using diagnosis codes in an inpatient and outpatient setting.
Main measure of effect:	Hazard ratio.

Objective:	To evaluate the effect of tirzepatide vs semaglutide on a negative control outcome of hernia.
Hypothesis:	We hypothesize that tirzepatide will not have a different effect from semaglutide.
Population (mention key inclusion-exclusion criteria):	Individuals aged 40 years or older with heart failure with preserved ejection fraction.
Exposure:	Tirzepatide.
Comparator:	Semaglutide.
Outcome:	Hernia (excluding patients with recent outcome prior to the follow-up time window (30 days)).
Time (when follow up begins and ends):	1 day after cohort entry date until the first of outcome, disenrollment, end of study period, discontinuation (45 days grace and risk window), switch between the arms, start of any other GLP-1-RA.
Setting:	The outcome will be measured using diagnosis and procedure codes in an inpatient or outpatient setting.
Main measure of effect:	Hazard ratio.

Objective:	To evaluate the effect of tirzepatide vs semaglutide on a negative control outcome of lumbar radiculopathy.
Hypothesis:	We hypothesize that tirzepatide will not have a different effect from semaglutide.
Population (mention key inclusion-exclusion criteria):	Individuals aged 40 years or older with heart failure with preserved ejection fraction.
Exposure:	Tirzepatide.
Comparator:	Semaglutide.
Outcome:	Lumbar radiculopathy (excluding patients with recent outcome prior to the follow-up time window (30 days)).

Time (when follow up begins and ends):	1 day after cohort entry date until the first of outcome, disenrollment, end of study period, discontinuation (4560 days grace and risk window), switch between the arms, start of any other GLP-1-RA.
Setting:	The outcome will be measured using diagnosis and procedure codes in an inpatient or outpatient setting.
Main measure of effect:	Hazard ratio.

6. Research methods

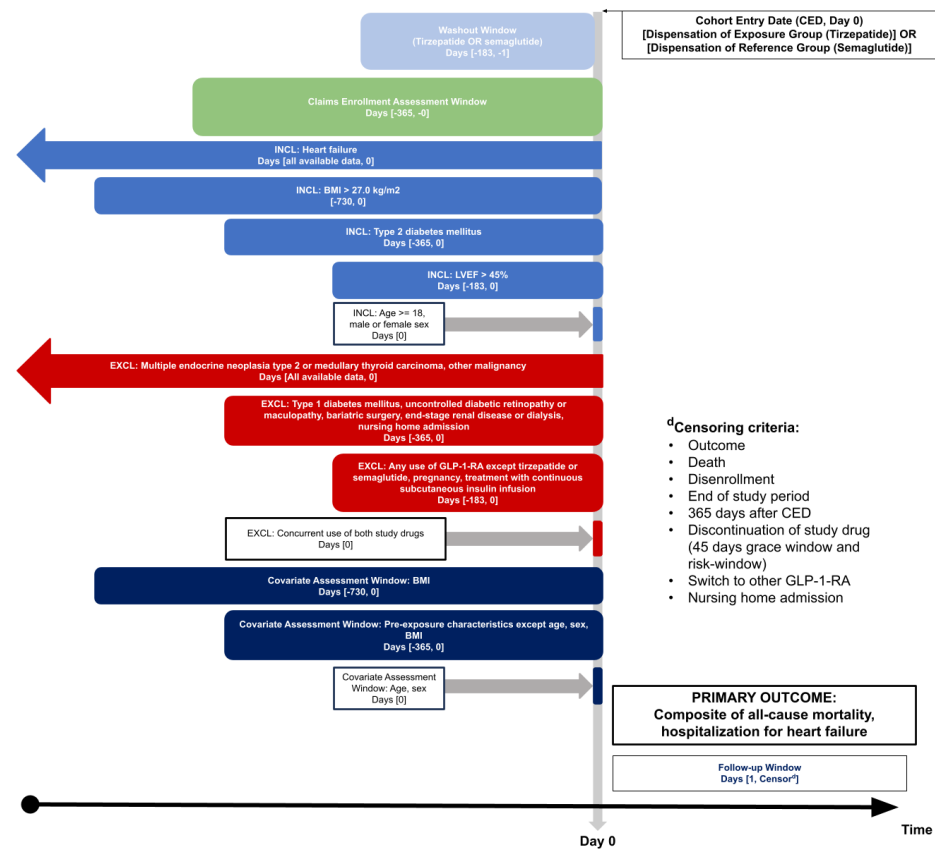

6.1 Study design

Research design (e.g. cohort, case-control, etc.): New user active-comparator cohort study.

Rationale for study design choice: The new user active-comparator design is a powerful design that may be able to address confounding by indication. It accomplishes this, in large part, through judicious selection of an appropriate active-comparator group.^{5,6} While selection of an appropriate comparator in the design phase is crucial, cohort studies often require additional adjustment of measurable confounders. A common method for adjusting for confounding is via a propensity score.

6.2 Study design diagram

Figure 1. Exposure-based cohort entry where the cohort entry date is selected after application of exclusion criteria

6.3 Setting

6.3.1 Context and rationale for definition of time 0 (and other primary time anchors) for entry to the study population

Time 0 in the database study was defined to emulate randomization to tirzepatide vs semaglutide in the target trial design. See appendix tables 1 and 2a for operational definitions and detailed code algorithms.

6.3.2 Context and rationale for study inclusion criteria:

Study inclusion criteria were defined to emulate the inclusion criteria for the target trial. See appendix tables 1 and 2 for operational definitions and detailed code algorithms. A flowchart of the study cohort assembly is provided in Appendix 3.

6.3.3 Context and rationale for study exclusion criteria

Study exclusion criteria were defined to emulate the exclusion criteria for the target trial. See appendix tables 1 and 2 for operational definitions and detailed code algorithms. A flowchart of the study cohort assembly is provided in Appendix 3.

6.4 Variables

6.4.1 Context and rationale for exposure(s) of interest

The exposure and comparator were defined to emulate the agents compared for the target trial, tirzepatide vs semaglutide. See appendix tables 1 and 2 for operational definitions and detailed code algorithms.

Algorithm to define duration of exposure effect:

Assuming the effect of the drug lasts for 45 days after the last day's supply, we allow a 45 days gap between the dispensation (grace period) and also add 45 days at the end of the last day's supply (exposure risk window).

6.4.2 Context and rationale for outcome(s) of interest

The primary outcome for the database study was defined to be comparable to the emulations of the SUMMIT and STEP-HFpEF DM trials, the composite end point of all-cause mortality or heart failure hospitalization. See appendix tables 1 and 2d for operational definitions and detailed code algorithms. Optum includes death information from the inpatient discharged dead status, social security death master file, and deaths scraped from obituaries or other sources. MarketScan includes information from the inpatient discharged dead status up until 2016. PPV for heart failure diagnosis using ICD9 codes was 87% and for HHF 98%.^{7,8}

Secondary outcomes from the target trial that will be evaluated include:

1. Composite of all-cause mortality or a worsening heart failure event (exacerbated symptoms of heart failure resulting in hospitalization, intravenous diuretic therapy in an urgent care setting).
2. Worsening heart failure event (exacerbated symptoms of heart failure resulting in hospitalization or intravenous diuretic therapy in an urgent care setting).
3. Intravenous diuretic therapy in an urgent care setting.
4. Hospitalization for heart failure.
5. All-cause mortality.

Safety outcomes of interest include:

1. Urinary tract infections.
2. Serious bacterial infections.
3. Gastrointestinal adverse events.

Control outcomes of interest include:

1. Hernia (excluding patients with recent outcome prior to the follow-up time window). This is a negative control outcome where no difference in effect is expected for tirzepatide vs semaglutide.
2. Lumbar radiculopathy (excluding patients with recent outcome prior to the follow-up time window). This is a negative control outcome where no difference in effect is expected for tirzepatide vs semaglutide.

6.4.3 Context and rationale for follow up

Both on-treatment (OT) and intention-to-treat (ITT) analyses will be conducted. Adherence in clinical practice databases is expected to be much worse than in trial settings. The OT analysis targets the relative hazard of outcomes while on treatment and may more closely emulate the effect observed in highly adherent trial participants. Both OT and ITT will be conducted at 1-year follow-up.

Table 1. Operational Definitions of Follow Up

Follow up start	Day 1
-----------------	-------

Follow up end ¹	Select all that apply	Specify
Date of outcome	Yes	
Date of death	Yes	Part of the primary outcome.
End of observation in data	Yes	Date of disenrollment.
Day X following index date (specify day)	Yes	Day 365.
End of study period (specify date)	Yes	Different dates for different databases (Optum: November 30, 2024; Marketscan: December 31, 2023).
End of exposure (specify operational details, e.g. stockpiling algorithm, grace period)	Yes	45 days grace window and 45 days risk window.
Date of add to/switch from exposure (specify algorithm)	Yes	Date of augmentation or switching from an exposure to a comparator and vice versa.
Other date (specify)	Yes	Censor upon starting any other GLP-1-RA.

¹ Follow up ends at the first occurrence of any of the selected criteria that end follow up.

6.4.4 Context and rationale for covariates (confounding variables and effect modifiers, e.g. risk factors, comorbidities, comedications)

We identified a series of covariates that were likely confounders due to being strong risk factors for the primary outcome that were associated with choice of treatment. These include demographics, disease severity related variables, comorbid conditions, comedications, frailty, healthcare utilization and markers of health seeking behaviour.

6.5 Data analysis

6.5.1 Context and rationale for analysis plan

The study will use a propensity score based overlap weighting method.¹² The propensity score will be estimated as the probability of initiating tirzepatide vs semaglutide given the baseline patient characteristics using multivariable logistic regression models. As diagnostics for propensity score models, the study will evaluate distributional overlap, weight distribution, and covariate balance using standardized differences post-weighting. The study will estimate the hazard ratio for tirzepatide vs semaglutide on the composite all-cause mortality or heart failure hospitalization in the weighted population using a Cox proportional hazards model with robust standard errors.

Table 3. Primary, secondary, and subgroup analyses specification

A. Primary analysis

Hypothesis:	Tirzepatide is non-inferior to semaglutide in decreasing the risk of all-cause mortality or heart failure hospitalization for individuals with heart failure with preserved ejection fraction.
Exposure contrast:	Tirzepatide vs semaglutide.
Outcome:	Composite of all-cause mortality or heart failure hospitalization.
Analytic software:	Aetion, SAS 9.4, R.4.4.0
Model(s): (provide details or code)	Outcome model: Cox proportional hazards Follow-up time * status(0) = exposure
Confounding adjustment method	Name method and provide relevant details, e.g. bivariate, multivariable, propensity score weighting (specify weighting algorithm ratio and caliper), propensity score weighting (specify weight formula, trimming, truncation), propensity score stratification (specify strata definition), other.
	Overlap weighting based on the propensity score.
Missing data methods	Name method and provide relevant details, e.g. missing indicators, complete case, last value carried forward, multiple imputation (specify model/variables), other.
	Assumption that if no relevant claims diagnoses/procedures are present, the condition is not present.
Subgroup Analyses	List all subgroups
	Individuals <70, Individuals ≥70, Male, Female, BMI <40, BMI ≥40.

B. Secondary Analyses

Hypothesis:	Tirzepatide is non-inferior to semaglutide in decreasing the risk of all-cause mortality or worsening heart failure events (secondary outcome) for individuals with heart failure with preserved ejection fraction.
Exposure contrast:	Tirzepatide vs semaglutide.

Outcome:	Composite of all-cause mortality or all-cause mortality or a worsening heart failure event (exacerbated symptoms of heart failure resulting in hospitalization, intravenous diuretic therapy in an urgent care setting), and its respective individual end points.
Analytic software:	Aetion, SAS 9.4, R.4.4.0
Model(s): (provide details or code)	Outcome model: Cox proportional hazards Follow-up time * status(0) = exposure
Confounding adjustment method	Name method and provide relevant details, e.g. bivariate, multivariable, propensity score weighting (specify weighting algorithm ratio and caliper), propensity score weighting (specify weight formula, trimming, truncation), propensity score stratification (specify strata definition), other.
	Overlap weighting based on the propensity score.
Missing data methods	Name method and provide relevant details, e.g. missing indicators, complete case, last value carried forward, multiple imputation (specify model/variables), other.
	Assumption that if no relevant claims diagnoses/procedures are present, the condition is not present.
Subgroup Analyses	List all subgroups
	N/A

Hypothesis:	Tirzepatide has no increased or decreased risk of urinary tract infections (safety outcome) compared to sitagliptin.
Exposure contrast:	Tirzepatide vs semaglutide.
Outcome:	Urinary tract infections.
Analytic software:	Aetion, SAS 9.4, R.4.4.0
Model(s): (provide details or code)	Outcome model: Cox proportional hazards Follow-up time*status(0) = exposure
Confounding adjustment method	Name method and provide relevant details, e.g. bivariate, multivariable, propensity score weighting (specify weighting algorithm ratio and caliper), propensity score weighting (specify weight formula, trimming, truncation), propensity score stratification (specify strata definition), other.
	Overlap weighting based on the propensity score.
Missing data methods	Name method and provide relevant details, e.g. missing indicators, complete case, last value carried forward, multiple imputation (specify model/variables), other.
	Assumption that if no relevant claims diagnoses/procedures are present, the condition is not present.
Subgroup Analyses	List all subgroups
	N/A.

Hypothesis:	Tirzepatide has no increased or decreased risk of serious bacterial infections (safety outcome) compared to semaglutide.
Exposure contrast:	Tirzepatide vs semaglutide.
Outcome:	Serious bacterial infections.

Analytic software:	Aetion, SAS 9.4, R.4.4.0
Model(s): (provide details or code)	Outcome model: Cox proportional hazards Follow-up time*status(0) = exposure
Confounding adjustment method	Name method and provide relevant details, e.g. bivariate, multivariable, propensity score weighting (specify weighting algorithm ratio and caliper), propensity score weighting (specify weight formula, trimming, truncation), propensity score stratification (specify strata definition), other.
	Overlap weighting based on the propensity score.
Missing data methods	Name method and provide relevant details, e.g. missing indicators, complete case, last value carried forward, multiple imputation (specify model/variables), other.
	Assumption that if no relevant claims diagnoses/procedures are present, the condition is not present.
Subgroup Analyses	List all subgroups
	N/A.

Hypothesis:	Tirzepatide has no increased or decreased risk of gastrointestinal adverse events (safety outcome) compared to semaglutide.
Exposure contrast:	Tirzepatide vs semaglutide.
Outcome:	Gastrointestinal adverse events.
Analytic software:	Aetion, SAS 9.4, R.4.4.0
Model(s): (provide details or code)	Outcome model: Cox proportional hazards Follow-up time*status(0) = exposure
Confounding adjustment method	Name method and provide relevant details, e.g. bivariate, multivariable, propensity score weighting (specify weighting algorithm ratio and caliper), propensity score weighting (specify weight formula, trimming, truncation), propensity score stratification (specify strata definition), other.
	Overlap weighting based on the propensity score.
Missing data methods	Name method and provide relevant details, e.g. missing indicators, complete case, last value carried forward, multiple imputation (specify model/variables), other.
	Assumption that if no relevant claims diagnoses/procedures are present, the condition is not present.
Subgroup Analyses	List all subgroups
	N/A.

Hypothesis:	Tirzepatide has no increased or decreased risk of hernia (control outcome) compared to semaglutide.
Exposure contrast:	Tirzepatide vs semaglutide.
Outcome:	Hernia (excluding patients with recent outcome prior to the follow-up time window (30 days)) (negative control outcome).
Analytic software:	Aetion, SAS 9.4, R.4.4.0
Model(s): (provide details or code)	Outcome model: Cox proportional hazards Follow-up time*status(0) = exposure

Confounding adjustment method	Name method and provide relevant details, e.g. bivariate, multivariable, propensity score weighting (specify weighting algorithm ratio and caliper), propensity score weighting (specify weight formula, trimming, truncation), propensity score stratification (specify strata definition), other.
	Overlap weighting based on the propensity score.
Missing data methods	Name method and provide relevant details, e.g. missing indicators, complete case, last value carried forward, multiple imputation (specify model/variables), other.
	Assumption that if no relevant claims diagnoses/procedures are present, the condition is not present.
Subgroup Analyses	List all subgroups
	N/A.

Hypothesis:	Tirzepatide has no increased or decreased risk of radiculopathy (control outcome) compared to semaglutide.
Exposure contrast:	Tirzepatide vs semaglutide.
Outcome:	Lumbar radiculopathy (excluding patients with recent outcome prior to the follow-up time window (30 days)) (negative control outcomes).
Analytic software:	Aetion, SAS 9.4, R.4.4.0
Model(s): (provide details or code)	Outcome model: Cox proportional hazards Follow-up time*status(0) = exposure
Confounding adjustment method	Name method and provide relevant details, e.g. bivariate, multivariable, propensity score weighting (specify weighting algorithm ratio and caliper), propensity score weighting (specify weight formula, trimming, truncation), propensity score stratification (specify strata definition), other.
	Overlap weighting based on the propensity score.
Missing data methods	Name method and provide relevant details, e.g. missing indicators, complete case, last value carried forward, multiple imputation (specify model/variables), other.
	Assumption that if no relevant claims diagnoses/procedures are present, the condition is not present.
Subgroup Analyses	List all subgroups
	N/A.

Table 4. Sensitivity analyses – rationale, strengths and limitations

What is being varied? How?	Why? (What do you expect to learn?)	Strengths of the sensitivity analysis compared to the primary	Limitations of the sensitivity analysis compared to the primary
----------------------------	--	---	---

Hernia as a negative control outcome.	We are changing the outcome to hernia for which there is expected to be no causal effect from tirzepatide or semaglutide.	We will evaluate the potential impact of residual confounding on this outcome for which there is not expected to be a causal effect.	Evaluates the robustness of the interpretation of the primary analysis by evaluating the potential magnitude of unmeasured confounding.	This analysis assumes that the confounding structure is the same or similar for the negative control outcome as the outcome of interest.
Lumbar radiculopathy as a negative control outcome.	We are changing the outcome to lumbar radiculopathy for which there is expected to be no causal effect from semaglutide.	We will evaluate the potential impact of residual confounding on this outcome for which there is not expected to be a causal effect.	Evaluates the robustness of the interpretation of the primary analysis by evaluating the potential magnitude of unmeasured confounding.	This analysis assumes that the confounding structure is the same or similar for the negative control outcome as the outcome of interest.
Broader definition of end point hospitalization for heart failure.	Instead of requiring an inpatient discharge diagnosis in the primary position for heart failure, we will allow an inpatient diagnosis in any position for heart failure.	Helps determine whether restricting to primary-position heart failure diagnoses omits relevant cases or whether including secondary diagnoses introduces misclassification.	Increases sensitivity for capturing hospitalizations for heart failure.	Some hospitalizations may primarily be for other conditions rather than heart failure itself.
Intention-to-treat analyses to address potential informative censoring.	To address potential informative censoring.	We will consider the first-used medication for 365 days without considering drug discontinuation or switching, mimicking an “intention-to-treat” approach.	Reflects follow-up regimen of RCT.	Persistence of drug use is shorter in clinical practice whereas adherence is typically higher in RCTs. Therefore, we expect the estimated effects will be diluted toward the null, underestimating the true treatment effect had patients remained on therapy.
Apply eligibility criteria from the SUMMIT trial ¹	To assess how variations in eligibility criteria influence the study population size and treatment effect estimates.	We will learn how slightly different eligibility criteria and their operationalization can influence treatment effect estimates.	Assesses the impact of treatment effect estimation due to differential cohort assembly.	Estimates will not be directly used to assess robustness of primary analysis.

Apply eligibility criteria from the STEP-HFpEF DM trial ²	To assess how variations in eligibility criteria influence the study population size and treatment effect estimates.	We will learn how slightly different eligibility criteria and their operationalization can influence treatment effect estimates.	Assesses the impact of treatment effect estimation due to differential cohort assembly.	Estimates will not be directly used to assess robustness of primary analysis.

6.6 Data sources

6.6.1 Context and rationale for data sources

Reason for selection: The study will be conducted in 2 US health care claims databases: Optum Clinformatics (2022-2024), and Merative Marketscan (2022-2023). Data from the Merative Marketscan database will only be included if sufficient sample size can be accrued.

Strengths of data source(s): Each data source contains deidentified, longitudinal, date-stamped information on patient enrollment, demographics, inpatient/outpatient diagnosis and procedures, admission and discharge dates, and medication dispensation. The death data is captured in the Optum database from inpatient discharge status, social security death master file, and deaths scraped from obituaries or other sources. The death data in MarketScan is captured from the social security death master file and inpatient discharge status. It is recognized that the social security death master file has high specificity and positive predictive value for deaths. While this data resource has under captured deaths since 2011, the capture of deaths is not expected to be differential between compared exposure groups. The death data is captured in the Medicare database from inpatient discharge status, and social security death master file.¹³⁻¹⁵

Limitations of data source(s): Patient healthcare encounters are only observable when they are enrolled in an insurance plan that contributes to the database. Patients may change insurance plans for multiple reasons. Both Optum Clinformatics and Merative MarketScan are primarily employer based insurance databases where patients may disenroll with job changes. In claims data, dispensing data for inpatient medication is unavailable. Diagnoses reflect billing practices, therefore algorithms (preferably validated) are needed for accurate phenotyping of patient conditions. Services that are not covered by insurance do not appear in the data. The target trial would ideally evaluate cardiovascular deaths, however we will evaluate all-cause mortality in the emulation because most deaths in this cohort of patients at high cardiovascular risk will be related to cardiovascular reasons, the cause of death is not recorded for databases not linked to NDI, and the performance of NDI at identifying cardiovascular causes of death may be suboptimal.¹⁵

Data source provenance/curation:

Information about Optum Clinformatics and Merative MarketScan can be found in data dictionaries and user guides that are provided to clients.

Table 5. Metadata about data sources and software

	Data 1	Data 2
Data Source(s):	Optum Clinformatics	Merative Marketscan
Study Period:	13 th May 2022	13 th May 2022
Eligible Cohort Entry Period:	November 30, 2024	December 31, 2023
Data Version (or date of last update):	April 2025	Mortality Cut Set A Received 2024-03-01
Data sampling/extraction criteria:	n/a	n/a
Type(s) of data:	Administrative claims	Administrative claims
Data linkage:	n/a	n/a
Conversion to CDM*:	n/a	n/a
Software for data management:	Aetion Evidence Platform® (2025)	Aetion Evidence Platform® (2025)

*CDM = Common Data Model

6.7 Data management

Tracking data: The Data Use Agreement (DUA) Custodian (Principal Investigator) and the Division Operations Manager (Winta Tekle) are responsible for receiving and creating a record of new data associated with the given request. The Operations Manager is responsible for all indexing and archiving of documents and electronic media related to data that the Division receives and will log data location, data contents, and associated DUA and Institutional Review Board (IRB) numbers in the Division's centralized tracking system.

Handling and storage: In-scope data will be stored utilizing Mass General Brigham approved information systems – i.e., Division servers and Mass General Brigham network storage.

Archiving: Data retention and any removal will be executed by the Division Operations Manager (Winta Tekle) and Data Manager (Todd MacGarvey). The Division follows Mass General Brigham enterprise record retention policies and follow the terms of the agreement through which the in-scope data was received.

Information security: The Division follows Mass General Brigham's Enterprise Information Security Program (EISP). The EISP helps by providing assurance that Mass General Brigham information and information systems are protected from unauthorized access, use, disclosure, duplication, modification, or destruction in order to maintain their confidentiality, integrity, and availability. To that end, the EISP policies, standards and procedures create an information security framework that is aligned with the recommendations of the International Organization for Standardization's (ISO) publication 27001 and the National Institute of Standards and Technology's (NIST) publication 800-53 Family of Controls and MGB regulatory and legal requirements (as a HIPAA covered entity).

Mass General Brigham workforce members are required to complete new workforce privacy and information security training upon hire and annually thereafter. Refresh training is provided as appropriate. Mass General Brigham workforce members are required to review and sign a Confidentiality Agreement upon hire and annually thereafter. Additionally, we follow Enterprise Information Security and Privacy policies, including Managing Workforce Members Information Security Responsibilities Policy, which was developed to help assure that Mass General Brigham workforce members are competent and eligible to support the information security responsibilities associated with their role. Mass General Brigham workforce, including Division staff, are required to comply with Enterprise Information Security and Privacy Policies.

Facilities: The research team uses a highly secure, state-of-the-art, computing facility housed at Mass General Brigham's Corporate Data Centers in Needham and Marlborough, Massachusetts as well as Amazon Web Services (AWS). We maintain redundant storage for maximal data integrity and high-speed data access.

The Division uses Mass General Brigham corporate provisioned servers to analyze and store data in connection with this project. There are strict access controls enforced by technical means to ensure that only study staff who have been approved to conduct data analyses and contracted data engineers are able to access data (e.g., Mass General Brigham Authentication (Active Directory) utilized; auditing, logging, and monitoring enabled; firewalls enabled; etc.). All Division servers used in this study are accessible to only authorized staff only through the MGB network and utilizing VPN as appropriate (i.e., users must be on the network and logged into VPN to access). Mass General Brigham has a network information security monitoring team and in-scope servers are enrolled in enterprise security tools (e.g., vulnerability scanning service, antivirus, etc.).

The Division also uses AWS. In-scope AWS services / resources have undergone review and assessment by Mass General Brigham's Information Security Risk Assessment Team/ InfoSec Risk Management Team as required and in alignment with NIST 800-30: Guide for Conducting Risk Assessments. In-scope AWS servers are for our exclusive use (reserved instances), are covered under our organization's Business Associate Agreement with AWS. In-scope servers are housed in anonymous facilities that are not branded as AWS facilities. Physical access is strictly controlled both at the perimeter and at building ingress points by professional security staff utilizing video surveillance, intrusion detection systems, and other electronic means.

Security attributes and controls for the Division's use of in-scope AWS in connection with this project include: encryption at rest and in transit (industry standard AES-256 encryption, SSL/TSL), anti-malware, latest OS updates and patches as well as anti-virus; multi-factor authentication (MFA), Identity and Access Management, including SSO; auditing and logging; principle of least privilege, including for traffic and ports (e.g., deny all default configurations), use of VPC enabled Step functions, etc.; separation between environments; minimum necessary (out of the box AWS roles are not used as they can be overly permissive); all data would reside in the US domestic regions – use only US east HIPAA compliant region; performance monitoring enabled and reviewed as per internal processes; passwords compliant with enterprise password policy and, as appropriate, more protective

password requirements; etc. Our Division's AWS use is also subject to ongoing evaluation and monitoring as well – e.g., vulnerability scanning and management, access review, etc.

A data file list will be maintained in Amazon S3 and tracked through Cloudtrail and Cloudwatch. Reporting of data file availability for any file stored in an S3 bucket will be controlled by MGB.

Amazon EC2, Amazon EBS, and Amazon VPC are integrated with AWS CloudTrail, a service that provides a record of actions taken by a user, role, or an AWS service in Amazon EC2, Amazon EBS, and Amazon VPC. CloudTrail captures all API calls for Amazon EC2, Amazon EBS, and Amazon VPC as events, including calls from the console and from code calls to the APIs. MGB IT/security staff have full access to CloudTrail to ensure that CloudTrail monitoring is available at all times. Amazon CloudWatch Events delivers a near-real-time stream of system events that describe changes in AWS resources. Amazon CloudTrail can log, continuously monitor, and retain account activity related to actions across the MGB AWS infrastructure. CloudTrail provides event history of MGB AWS account activity. This event history simplifies security analysis, resource change tracking, and troubleshooting and complies with requirements to ensure the data file inventory is controlled by MGB.

Backups: Backups are created using industry recognized Cryptographic mechanisms (e.g., 256-bit AES encryption) as appropriate and required. Data are backed up within the MGB network from the MGB Needham data center to the MGB Marlborough data center via replication/mirroring and volume-level snapshots. AWS Backup supports both instance-level backups as Amazon Machine Images (AMIs) and volume-level backups as separate snapshots based on the resource tags. AMIs allow MGB IT and security staff to create backups of all S3 and EC2 instances.

In addition to the safeguards listed above, the Division follows enterprise privacy and information security policies and maintains internally procedures in connection with this project to safeguard the data in connection with this project as appropriate and required including: Physical Security and Environmental Controls for Electronic Information Policy; IT Access Control Standards for Users policy; Safeguarding Fax Copiers Printers Telephone Use and Pagers; Physical Removal and Transport of Protected Health Information and Personal Information policy, etc.

6.8 Quality control

Senior Programmers and Research Specialists perform QA/QC on raw or common data model converted data via SAS/R/Aetion software. The protocol will be iteratively developed and pre-specified data checks including feasibility counts and balance on baseline covariates will be conducted with outputs reviewed by MGB team members. Team members will review code lists to ensure fidelity to intended algorithms.

6.9 Study size and feasibility

See appendix 4 and appendix 5 (feasibility, weighting on age, sex, comorbidity score as well as all predefined propensity score variables). Propensity score distribution plots with c-statistics are available in appendix 6. Table 1 showing prevalence of baseline characteristics and standardized differences in distribution are available in appendix 7. Additional diagnostic evaluations, including balance assessments of laboratory and clinical examination test results not included in the propensity score as well as assessment of heart failure-related medication after follow-up, will be conducted to assess potential residual confounding and divergence of treatment over time.

7. Limitation of the methods

As we are using secondary data and the data were not collected for research purposes, some important variables may not be collected or will be measured imperfectly. We have selected validated algorithms when possible and we have created proxies for important variables that are not directly captured in the data to reduce confounding by unmeasured factors. One measurement difference is, for example, an inclusion criterion requiring left ventricular ejection fraction (LVEF). Since these measurements are not captured in claims, we proxied LVEF by applying a predictive algorithm for LVEF with high positive predictive value (PPV) of 91%. This has been a frequently used method in other database studies.^{16,17,18}

Although we plan to emulate the important features of the target trial as closely as possible in healthcare claims, there may be some elements of the design that are not emulable with a database study, which means that the real-world evidence obtained from the database study and target trial will address slightly different clinical questions. For example, in routine clinical care, adherence to treatment is typically not as high as it is in a randomized trial with strong measures in place to encourage adherence to the study protocol. This means that there is more discontinuation and short-term medication use in the patients identified in claims databases than trial participants.

8. Protection of human subjects

This study has been approved by the Brigham and Women's Hospital Institutional Review Board.

	4	History of bariatric surgery	ICD-10-CM	PROMISE team	DoPE					No	
	5	History of nursing home admission	ICD-10-CM	PROMISE team	DoPE					No	
	6	Pregnant female or breast-feeding	ICD-10-CM	Pregnancy team	DoPE					No	
	7	Uncontrolled and potentially unstable diabetic retinopathy or maculopathy	ICD-10-CM	LEAD-2	DoPE					No	
	8	Treatment with continuous subcutaneous insulin infusion	ICD-10-CM, CPT/HCPC	https://www.cms.gov/medicare-coverage-database/view/article.aspx?articleid=58133	N/A						
	9	Multiple endocrine neoplasia type 2 or medullary thyroid carcinoma	ICD-10-CM	PROMISE team	DoPE					No	
	10	Cancer	ICD-10-CM	PROMISE team	DoPE					No	

Appendix 3. Flowchart for cohort assembly

OPTUM (May 13, 2022 to Nov 30, 2024)		
	Excluded Patients	Remaining Patients
Patients in dataset		95,349,410
Patients meeting cohort entry criteria		869,256
Excluded due to insufficient enrollment	-232,106 (27%)	637,150
Excluded due to prior use of referent	-344,867 (54%)	292,283
Excluded due to prior use of exposure	-183,703 (63%)	108,580
Excluded because patient qualified in >1 exposure category	-9 (<1%)	108,571
Excluded based on Incl 0 - Gender	-13 (<1%)	108,558
Excluded based on Incl 1 - History of T2DM	-16,410 (15%)	92,148
Excluded based on Incl 2 - BMI \geq 27.0 kg/m ² (ICD code)	-21,476 (23%)	70,672
Excluded based on Incl 2.1 - BMI \geq 27.0 kg/m ² (Lab value, truncated)	-993 (1%)	69,679
Excluded based on Incl 3.1 - Heart failure	-35,840 (51%)	33,839
Excluded based on Incl 3.2 - HFpEF	-373 (1%)	33,466
Excluded based on Incl 4 - Age \geq 18	-0 (<1%)	33,466
Excluded based on Excl 1 - Treatment with any GLP-1 receptor agonis	-1,165 (3%)	32,301
Excluded based on Excl 2 - History of T1DM	-624 (2%)	31,677
Excluded based on Excl 4 - End-stage renal disease or chronic or inte	-514 (2%)	31,163
Excluded based on Excl 5 - History of bariatric surgery	-188 (<1%)	30,975
Excluded based on Excl 6 - History of nursing home admission	-1,196 (4%)	29,779
Excluded based on Excl 7 - Pregnant female or breast-feeding	-5 (<1%)	29,774
Excluded based on Excl 8 - Uncontrolled and potentially unstable diab	-303 (1%)	29,471
Excluded based on Excl 9 - Treatment with continuous subcutaneous	-35 (<1%)	29,436
Excluded based on Excl 10 - Multiple endocrine neoplasia type 2 or m	-46 (<1%)	29,390
Excluded based on Excl 11 - Have a history of an active or untreated m	-1,272 (4%)	28,118
Patients in Exposure Group		8,520
Patients in Referent Group		19,598
Total Patients		28,118

Appendix 4. 1st Feasibility Assessment

Table of Contents

- A. Patient characteristics by treatment group
- B. Summary Parameters of Study Population
- C. Median Follow up Time in Overall Study Population
- D. Reasons for Censoring in Overall Study Population
- E. Initial Power Assessment
- F. Aetion report link
- G. Review by Principal Investigator

In order to complete the initial power analysis, a dummy outcome of a 90-day gap in database enrollment was used. This outcome is used to ensure that no

OPTUM: Study period from May 13, 2022 to Nov 30, 2024

A. Patient characteristics by treatment group (follow-up start is 1 days after CED, so few patients and dropped, hence table 1 could include slightly fewer patients than the attrition table

Before weight	Optum		
Variable	Reference-	Exposure -	Difference

	Intravenous diuretics	
Other medications	Nitrates	
	Anti-arrhythmics	
	Statins	
	PCSK9 inhibitors and other lipid-lowering drugs	
	Antiplatelet agents	
	Oral anticoagulants	
	COPD/Asthma medication	
	NSAIDs	
	Oral corticosteroids	
	Osteoporosis agents (incl. bisphosphonates)	
	Opioids	
	Anti-depressants	
	Antipsychotics	
	Anxiolytics/hypnotics, benzodiazepines	
	Urinary tract infections antibiotics	
	Laxatives	
Healthcare utilization markers	Number of distinct medications, median (iqr), mean (sd)	
	Number of emergency department visit median (iqr), mean (sd)	
	Number of office visits median (iqr), mean (sd)	
	Number of endocrinologist visits, median (iqr), mean (sd)	
	Number of cardiologist visits, median (iqr), mean (sd)	
	Number of internal medicine/family medicine visits, median (iqr), mean (sd)	
	Number of electrocardiograms, median (iqr), mean (sd)	
	Number of echocardiograms, median (iqr), mean (sd)	
	Pharmacy out-of-pocket cost, median (iqr), mean (sd)	
	Unique brand medications, median (iqr), mean (sd)**	
	Unique generic medications, median (iqr), mean (sd)**	
Healthy behavior markers	Ratio of unique brand to generic medications, median (iqr), mean (sd)	
	Colonoscopy, Sigmoidoscopy	
	Flu vaccine / Pneumococcal vaccine	
	Pap smear	
	PSA test	
	Fecal Occult Blood Test	
	Bone mineral density tests	
	Mammograms	
Laboratory and diagnostic tests	Number of HbA1c tests, median (iqr), mean (sd)	
	Number of Lipid panels, median (iqr), mean (sd)	
	Number of Creatinine tests, median (iqr), mean (sd)	
	Number of Urine tests, median (iqr), mean (sd)	
Lab values	HbA1c**	If <2 or >20, then set to missing
	Glucose**	If <30, then set to missing
	Creatinine**	If <0.8, then 0.8 AND >30, then set to missing
	Systolic blood pressure**	If <30, then set to missing
	Heart rate**	If <30, then set to missing
	BMI**	If <10 or >100, then set to missing
	BNP**	If 0 or >10,000, then set to missing
	proBNP**	If 0 or >20,000, then set to missing
	eGFR**	If 0, then set to missing
Burden of comorbidities	Combined comorbidity score	
	Frailty score	
Baseline hospitalizations and hospital metrics	Number of any hospitalization, median (iqr), mean (sd)	
	0, 1, >1 hospitalizations for heart failure	
	0, 1, >1 hospitalizations for other reason	
Calendar year of cohort entry	Calendar year

	Mammograms	77067	PX	SCREENING MAMMOGRAPHY, BILATERAL (2-VIEW STUDY OF EACH BREAST), INCLUDING COMPUTER-AIDED DETECTION (CAD) WHEN PERFORMED
	Mammograms	G0202	PX	SCREENING MAMMOGRAPHY, PRODUCING DIRECT DIGITAL IMAGE, BILATERAL, ALL VIEWS
	Mammograms	G0204	PX	DIAGNOSTIC MAMMOGRAPHY, PRODUCING DIRECT 2-D DIGITAL IMAGE, BILATERAL, ALL VIEWS / DIAGNOSTIC MAMMOGRAPHY, PRODUCING DIRECT DIGITAL IMAGE, BILATERAL, ALL VIEWS
	Mammograms	G0206	PX	DIAGNOSTIC MAMMOGRAPHY, PRODUCING DIRECT 2-D DIGITAL IMAGE, UNILATERAL, ALL VIEWS / DIAGNOSTIC MAMMOGRAPHY, PRODUCING DIRECT DIGITAL IMAGE, UNILATERAL, ALL VIEWS
	Mammograms	G0207	PX	DIAGNOSTIC MAMMOGRAPHY, FILM PROCESSED TO PRODUCE DIGITAL IMAGE ANALYZED FOR POTENTIAL ABNORMALITIES, UNILATERAL, ALL VIEWS
	Mammograms	G0236	PX	DIGITIZATION OF FILM RADIOGRAPHIC IMAGES WITH COMPUTER ANALYSIS FOR LESION DETECTION, OR COMPUTER ANALYSIS OF DIGITAL MAMMOGRAM FOR LESION DETECTION, AND FURTHER PHYSICIAN REVIEW FOR INTERPRETATION, DIAGNOSTIC MAMMOGRAPHY (LIST SEPARATELY IN ADDITION TO CODE FOR PRIMARY PROCEDURE)
	Number of HbA1c tests	80061	PX	HEMOGLOBIN, GLYCOSYLATED (A1C)
	Number of Lipid panels	82465	PX	LIPID PANEL THIS PANEL MUST INCLUDE THE FOLLOWING: CHOLESTEROL, SERUM, TOTAL (82465) LIPOPROTEIN, DIRECT MEASUREMENT, HIGH DENSITY CHOLESTEROL (HDL CHOLESTEROL) (83718) TRIGLYCERIDES (84478)
	Number of Lipid panels	83701	PX	CHOLESTEROL, SERUM OR WHOLE BLOOD, TOTAL
	Number of Lipid panels		PX	LIPOPROTEIN, BLOOD; HIGH RESOLUTION FRACTIONATION AND QUANTITATION OF LIPOPROTEINS INCLUDING LIPOPROTEIN SUBCLASSES WHEN PERFORMED (EG, ELECTROPHORESIS, ULTRACENTRIFUGATION)

Lab values		83704	PX	LIPOPROTEIN, BLOOD; QUANTITATION OF LIPOPROTEIN PARTICLE NUMBER(S) (EG, BY NUCLEAR MAGNETIC RESONANCE SPECTROSCOPY), INCLUDES LIPOPROTEIN PARTICLE SUBCLASS(ES), WHEN PERFORMED
	Number of Lipid panels	83718	PX	LIPOPROTEIN, DIRECT MEASUREMENT; HIGH DENSITY CHOLESTEROL (HDL CHOLESTEROL)
	Number of Lipid panels	83721	PX	LIPOPROTEIN, DIRECT MEASUREMENT; LDL CHOLESTEROL
	Number of Lipid panels	84478	PX	TRIGLYCERIDES
	Number of Creatinine tests	80047	PX	BASIC METABOLIC PANEL (CALCIUM, IONIZED) THIS PANEL MUST INCLUDE THE FOLLOWING: CALCIUM, IONIZED (82330) CARBON DIOXIDE (BICARBONATE) (82374) CHLORIDE (82435) CREATININE (82565) GLUCOSE (82947) POTASSIUM (84132) SODIUM (84295) UREA NITROGEN (BUN) (84520)
	Number of Creatinine tests	80048	PX	BASIC METABOLIC PANEL (CALCIUM, TOTAL) THIS PANEL MUST INCLUDE THE FOLLOWING: CALCIUM, TOTAL (82310) CARBON DIOXIDE (BICARBONATE) (82374) CHLORIDE (82435) CREATININE (82565) GLUCOSE (82947) POTASSIUM (84132) SODIUM (84295) UREA NITROGEN (BUN) (84520)
	Number of Creatinine tests	80053	PX	COMPREHENSIVE METABOLIC PANEL THIS PANEL MUST INCLUDE THE FOLLOWING: ALBUMIN (82040) BILIRUBIN, TOTAL (82247) CALCIUM, TOTAL (82310) CARBON DIOXIDE (BICARBONATE) (82374) CHLORIDE (82435) CREATININE (82565) GLUCOSE (82947) PHOSPHATASE, ALKALINE (84075) POTASSIUM (84132) PROTEIN, TOTAL (84155) SODIUM (84295) TRANSFERASE, ALANINE AMINO (ALT) (SGPT) (84460) TRANSFERASE, ASPARTATE AMINO (AST) (SGOT) (84450) UREA NITROGEN (BUN) (84520)
	Number of Creatinine tests	80069	PX	RENAL FUNCTION PANEL THIS PANEL MUST INCLUDE THE FOLLOWING: ALBUMIN (82040) CALCIUM, TOTAL (82310) CARBON DIOXIDE (BICARBONATE) (82374) CHLORIDE (82435) CREATININE (82565) GLUCOSE (82947) PHOSPHORUS INORGANIC (PHOSPHATE) (84100) POTASSIUM (84132) SODIUM (84295) UREA NITROGEN (BUN) (84520)
	Number of Creatinine tests	84520	PX	UREA NITROGEN; QUANTITATIVE
	Number of Urine tests	81000	PX	URINALYSIS, BY DIP STICK OR TABLET REAGENT FOR BILIRUBIN, GLUCOSE, HEMOGLOBIN, KETONES, LEUKOCYTES, NITRITE, PH, PROTEIN, SPECIFIC GRAVITY, UROBILINOGEN, ANY NUMBER OF THESE CONSTITUENTS; NON
	Number of Urine tests	81001	PX	URINALYSIS, BY DIP STICK OR TABLET REAGENT FOR BILIRUBIN, GLUCOSE, HEMOGLOBIN, KETONES, LEUKOCYTES, NITRITE, PH, PROTEIN, SPECIFIC GRAVITY, UROBILINOGEN, ANY NUMBER OF THESE CONSTITUENTS; AUTOMATED, WITH MICROSCOPY
	Number of Urine tests	81002	PX	URINALYSIS, BY DIP STICK OR TABLET REAGENT FOR BILIRUBIN, GLUCOSE, HEMOGLOBIN, KETONES, LEUKOCYTES, NITRITE, PH, PROTEIN, SPECIFIC GRAVITY, UROBILINOGEN, ANY NUMBER OF THESE CONSTITUENTS; AUTOMATED, WITHOUT MICROSCOPY
	Number of Urine tests	81003	PX	URINALYSIS, BY DIP STICK OR TABLET REAGENT FOR BILIRUBIN, GLUCOSE, HEMOGLOBIN, KETONES, LEUKOCYTES, NITRITE, PH, PROTEIN, SPECIFIC GRAVITY, UROBILINOGEN, ANY NUMBER OF THESE CONSTITUENTS; AUTOMATED, WITHOUT MICROSCOPY
	Number of Urine tests	81005	PX	URINALYSIS; QUALITATIVE OR SEMIQUANTITATIVE, EXCEPT IMMUNOASSAYS
	Number of Urine tests	81007	PX	URINALYSIS; BACTERIURIA SCREEN, EXCEPT BY CULTURE OR DIPSTICK
	Number of Urine tests	81015	PX	URINALYSIS; MICROSCOPIC ONLY
	Number of Urine tests	81020	PX	URINALYSIS; 2 OR 3 GLASS TEST
	Number of Urine tests	81099	PX	UNLISTED URINALYSIS PROCEDURE
	Number of Urine tests	82101	PX	ALKALOIDS, URINE, QUANTITATIVE
	Number of Urine tests	83069	PX	HEMOGLOBIN; URINE
	Number of Urine tests	83070	PX	HEMOSIDERIN, QUALITATIVE
	Number of Urine tests	86000	PX	AGGLUTININS, FEBRILE (EG, BRUCELLA, FRANCISELLA, MURINE TYPHUS, Q FEVER, ROCKY MOUNTAIN SPOTTED FEVER, SCRUB TYPHUS), EACH ANTIGEN
	Number of Urine tests	87086	PX	CULTURE, BACTERIAL; QUANTITATIVE COLONY COUNT, URINE
	Number of Urine tests	87088	PX	CULTURE, BACTERIAL; WITH ISOLATION AND PRESUMPTIVE IDENTIFICATION OF EACH ISOLATE, URINE
	Number of Urine tests	87001	PX	CULTURE, BACTERIAL, URINE; QUANTITATIVE, SENSITIVITY STUDY
