

# EU Focal Impulse and Rotor Modulation Registry

## Topera® E-FIRM Registry

### Overview and Registry Synopsis

#### Overview

**Protocol number** The protocol number is E-FIRM-02  
NCT-02386345

**Revision and date** Revision: E  
Date: July 29th, 2014

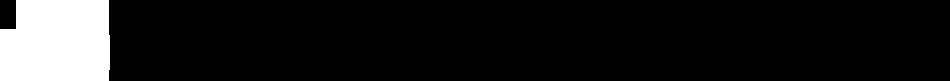

**Principal investigator(s)** Principal investigators per site are listed in the table below, additional sites could be added

| Site # | Institution          | Investigator |
|--------|----------------------|--------------|
| 01     | Herzzentrum, Leipzig | [REDACTED]   |
| 02     |                      |              |
| 03     |                      |              |
| 04     |                      |              |
| 05     |                      |              |
| 06     |                      |              |
| 07     |                      |              |
| 08     |                      |              |

#### Ethics Committee

**ECs** The registry will be submitted to the EC of the PI, to the Ethics Commission of the Universität Leipzig as a leading EC and/ or the relevant ECs of the participating sites.

# Confidentiality Agreement

## **Steering/ Publication Committee**

-  [REDACTED]

## Sponsor

Topera Inc., Palo Alto as sponsor for the Registry

## Synopsis

### Introduction

Atrial fibrillation (AF) is the most common sustained arrhythmia in man, and has an increasing population prevalence over time. Treatment is aimed at stroke prevention on the one hand, and amelioration of symptoms (palpitations, lightheadedness, dyspnea, fatigue) due to the arrhythmia. Medical therapy often fails to render a satisfactory response for the latter, prompting the search for alternative therapies. Surgical and, in the last 15 years, catheter ablation techniques have been devised to try to prevent episodes from starting. Groundbreaking work by Haïssaguerre showed that premature discharges or rapid repeated firing from the pulmonary veins (PVs) could trigger AF episodes and that electrical isolation of the PVs could potentially cure the patient of AF. PV isolation currently is a painstaking process consisting of delivering radiofrequency energy in the left atrium to isolate these veins. Such procedures take 3-5 hr to complete depending on the complexity of the individual case, and a large percentage of patients require a 2<sup>nd</sup> or even 3<sup>rd</sup> procedure to achieve acceptable antiarrhythmic results. Despite considerable investigative effort, the exact pathophysiology of how PV triggers initiate and/or maintain episodes of AF has been elusive.

Recently, Narayan et al have developed an algorithm that has been licensed for use with a novel mapping technology (RhythmView, Topera, Inc, Palo Alto, CA) for analyzing atrial recordings during human AF, finding that >95% of cases demonstrate either a rapidly spinning rotor (small circuit) or very rapid focal impulse formation. Furthermore, they have shown that catheter ablation at these relatively circumscribed areas can significantly affect AF, either by substantial slowing of the rate or termination (to an atrial tachycardia or sinus rhythm). In the CONFIRM (CONventional vs Focal Impulse and Rotor Modulation) trial, patients were treated with either conventional mapping and ablation (largely PV isolation or PVI) vs ablation of rotors or sites of focal impulse formation as designated by the mapping algorithm, followed by conventional ablation (PVI). The authors found much higher acute and long-term efficacy when focal impulse and rotor modulation (FIRM ablation) was used (82.4 vs 44% freedom from AF at 24 months post procedure). Although CONFIRM was a controlled registry, a randomized evaluation would be warranted.

E-FIRM is a registry to track Topera Inc.'s FIRM products in terms of clinical usage, handling, and the safety and effectiveness of FIRM procedures for the treatment of symptomatic atrial fibrillation. There will be at least 150 patients enrolled in this registry

### Safety endpoint

Safety shall be evaluated both acute and long term.

| Endpoint          | Description  |
|-------------------|--|
| Acute success     | Freedom from major adverse events related to the procedure within seven days of the procedure.   |
| Long-term success | Freedom from cumulative major adverse events related to the procedure (including any repeat procedures required) within one year of the initial procedure. |

---

**Primary Efficacy endpoint** Efficacy endpoints are defined in the table below.

| Endpoint                       | Definition  |
|--------------------------------|---|
| Acute success of FIRM ablation | The acute success of FIRM guided ablation is defined as elimination of the rotors defined by absence of rotors in the FIRMap.   |
| Long term success              | Two sequential endpoints will be used for long term efficacy after the initial AF ablation procedure (only):<br>(1) Single Procedure Freedom from AF recurrence* at 3 months, and<br>(2) Single Procedure Freedom from AF recurrence* from 3-12 months after the initial AF ablation procedure<br><br>*Freedom from AF recurrence is defined as: No document episodes of AF >30 sec with conventional noninvasive monitoring or, in the case of an cardiac implanted electronic device (CIED), <1% AF noted overall and no episodes of AF>30 sec. |

The design of the registry is summarized in the table below.

**Registry design**

| Item   | Description  |
|--------|--|
| Design | This is a prospective registry to assess the safety and effectiveness of FIRM procedures for the treatment of symptomatic any type of atrial fibrillation. |

|                     |  |
|---------------------|--|
| Sample Size         | Each site will enroll all FIRM-guided patients undergoing AF ablation into this registry up to at least overall 150 subjects. FIRM-guided ablation is defined as ablating FIRM identified rotors independent of any additional ablation. |
| Randomization       | The registry is non-randomized but consecutive.  |
| Investigators       | Up to 2 investigators per site   |
| Investigative sites | Up to 10 investigative sites within Germany / Europe   |

|                           |   |
|---------------------------|---|
| <b>Patient population</b> | Subjects eligible for participation in the registry should be in accordance to the AF guidelines:<br><ul style="list-style-type: none"> <li>Reported incidence of at least two (2) documented episodes of symptomatic AF (paroxysmal, persistent or long standing persistent) during the three months preceding trial entry (at least one episode should be documented by rhythm strip or ECG).</li> <li>Attempt of at least one Class I or III anti-arrhythmia drug with failure defined as recurrence of symptomatic AF or adverse drug effect resulting in stopping the medication.</li> </ul> |
|---------------------------|---|

|                          |   |
|--------------------------|---|
| <b>Registry schedule</b> | The registry visits schedule will follow the standard routine procedure of each site. Proposed activities during the visits are described in the table below. Since this is a registry, these are data items that will be collected, if available, as consistent and applicable with routine and standard clinical care at each site. |
|--------------------------|---|

| Visit Timing                           | Description   |
|--|---|
| Procedure and immediate post-procedure | Cardiac ablation procedure (see "Ablation Procedure" for details). During the procedure, the patient will be monitored for adverse events. Appropriate clinical measures will be taken to treat the adverse event, should one occur.  |
| Seven-Ten Days Post Procedure          | The following assessments/procedures will be performed: <ul style="list-style-type: none"> <li>Symptom and rhythm assessment per defined follow up monitoring</li> <li>Follow up to assess for adverse events</li> </ul>  |
| Three Months Post Procedure            | The following assessments/procedures will be performed: <ul style="list-style-type: none"> <li>Diagnostic 12-lead ECG</li> <li>48-hr or 72-hr ambulatory continuous ECG monitor (Holter) or CIED interrogation, if applicable</li> <li>Symptom and rhythm assessment per defined follow up monitoring</li> <li>Concomitant anti-arrhythmic medications</li> <li>Adverse events</li> </ul> |
| Six Months Post Procedure              | The following assessments/procedures will be performed: <ul style="list-style-type: none"> <li>Diagnostic 12-lead ECG</li> <li>48-hr or 72-hr ambulatory continuous ECG monitor (Holter) or CIED interrogation, if applicable</li> <li>Symptom and rhythm assessment per defined follow up monitoring</li> <li>Concomitant anti-arrhythmic medications</li> <li>Adverse events</li> </ul> |

|                              |  |
|------------------------------|--|
| Twelve Months Post Procedure | <p>The following assessments/procedures will be performed:</p> <ul style="list-style-type: none"> <li>• Diagnostic 12-lead ECG</li> <li>• 48-hr or 72-hr ambulatory continuous ECG monitor (Holter) or CIED interrogation, if applicable</li> <li>• Symptom and rhythm assessment per defined follow up monitoring</li> <li>• Concomitant anti-arrhythmic medications</li> <li>• Adverse events</li> </ul> |
|------------------------------|--|

|   |  |
|---|--|
| <b>Ablation procedure description</b>   | Investigators should follow the standard procedure as defined by training from Topera Inc. and appropriate medical judgment for FIRM guided ablation with or without the conventional ablation procedure (mostly PVI) practiced at the individual site.  |
| <b>Post procedure rhythm monitoring</b> | According to routine and standard procedure of the site preferred would be for all subjects without CIED (having AF diagnostic algorithms) to receive a 48 or 72 hour Holter monitor at 3, 6, and 12 months post-procedure.  |
|   | AF symptoms should be documented as recurrent within the follow-up period, further treatment shall be at the discretion of the physician (e.g., drugs, re-ablation, etc.).   |
| <b>Description</b>                      | This is a consecutive registry to assess the safety and effectiveness of FIRM procedures for the treatment of symptomatic atrial fibrillation.   |
| <b>Patient numbering</b>                | Subjects will be assigned consecutive numbers per participating site in combination to a site code   |
| <b>Expertise</b>                        | <p>In order to participate in this E-FIRM registry, investigators must have completed the following:</p> <ul style="list-style-type: none"> <li>• Undergone the training provided by Topera, Inc. in the use of the FIRMap Catheter, RhythmView system and analysis of FIRMaps produced by the system</li> </ul> |

## Adverse Events

**Overview** All adverse events (unanticipated and anticipated) must be classified as serious or minor.

**Definitions** The table below describes the classifications of adverse events (AE). All major adverse events occurring during the registry will be included in the safety analysis.

| Term        | Definition   |
|-------------|--|
| Serious     | <p>Any adverse event which occurs following use of the device and:</p> <ul style="list-style-type: none"> <li>• is life-threatening*;</li> <li>• results in permanent impairment of a body function or permanent damage to a body structure; or</li> <li>• necessitates significant intervention, such as major surgery, to prevent permanent impairment of a body function or permanent damage to a body structure; or</li> <li>• requires hospitalization or an extended hospital stay; or</li> <li>• results in moderate transient impairment of a body function or transient damage to a body structure; or</li> <li>• requires intervention such as medication or cardioversion* to prevent permanent impairment of a body function or damage to a body structure**.</li> </ul> |
| Minor       | <p>Any adverse event that occurs <u>following use of the procedure</u> that results in minimal <i>transient</i> impairment of a body function or damage to a body structure, or which does not require any intervention other than monitoring.</p>   |
| Anticipated | <p>Anticipated or known possible adverse events associated with cardiac electrophysiology procedures (see detail listing below in “Anticipated AE”)</p>  |

| Term          | Definition                                       |
|---------------|--|
| Unanticipated | EU guideline and requirements will be applicable |

\* In this context, the term refers to an event in which the subject was at immediate risk of death at the time of the event; it does NOT refer to an event that might have caused death if it were more severe.

\*\* For example, if the occurrence of a “catheter insertion site hematoma” or an “AV fistula” requires a blood transfusion and/or surgical repair, it should be considered a major adverse event.

**Anticipated AE** Anticipated adverse events include:

| Description   | Description   |
|---|---|
| Discomfort due to insertion/removal of vascular sheaths beyond what is normally observed  | Ventricular arrhythmia requiring defibrillation                                 |
| Hemorrhage and/or hematoma at sheath insertion requiring evacuation or transfusion  | Cardiac tamponade due to perforation  |
| Extremity weakness, swelling, and/or pain   |   |
| Discomfort and/or damage to the skin, muscles, or nerves due to remaining in a supine position for an extended period of time.                  | Nerve injury (diaphragmatic paralysis, pyloric spasm, gastric hypomotility)     |
| Complete AV block   | Air embolism  |
| Nausea /vomiting  | Allergic reaction   |
| Headache different from baseline  | Endocarditis  |
| Hypertension >180 mm Hg systolic (repeated measures)  | Esophageal-atria fistula  |
| Hypotension <80 mm Hg systolic (repeated measures)  | Hemothorax  |
| Brief “black out” periods   | Pericarditis  |
| Shortness of breath/Dyspnea   | Pseudo aneurysm   |
| Feeling of chest pain, skipped beats, and/or rapid heart rate different from baseline   | Pulmonary vein stenosis   |
| Damage to skin from prolonged exposure to x-rays  | Radiation injury  |
| New arrhythmias (not previously documented)   | Renal failure form IV contrast  |
| Arterial injury requiring intervention  | Respiratory failure   |
| Thromboembolism   | Stroke/TIA  |
| Local/systemic infection  | Valvular damage   |
| Pneumothorax  | Pleural effusion  |
| AV fistula  | Pulmonary edema   |
| Thrombophlebitis  | Anemia requiring transfusion  |
| Pulmonary embolism  | Vasovagal reaction  |
| Myocardial infarction   | New pericardial effusion >1 cm  |
| Discomfort and/or damage to the skin, muscles, or nerves due to percutaneous access in excess of usual  | Death <b>(must be reported within the regulation of serious adverse events)</b> |
| Left heart access via trans-septal puncture has known potential adverse events of: cardiac perforation, cardiac tamponade, and embolic events.* |   |

\* Literature reviews have demonstrated that the risk of such events are <1%.  
 Mullins, Charles E. "Trans-septal left heart catheterization: Experience with a new technique in 520 pediatric and adult subjects." Pediatric Cardiology, v. 4, pgs. 239-246 (1983)

**Occurrence** The table below describes actions taken for adverse events that occur during and after the procedure.

| Timing          | Action  |
|-----------------|---|
| Intra-procedure | If the investigator determines that an adverse event occurs while the patient is in the electrophysiology lab (before or during the procedure), the investigator shall manage the patient as he/she would if a similar event occurred during a standard EP procedure. |
| Post-procedure  | Once the patient has left the electrophysiology lab, all medical/surgical management will be carried out in the standard manner for that institution  |

**Reporting SAEs, & deaths** Reporting requirements for deaths or other adverse events considered to be serious or unanticipated are described in the table below.

| Report to                    | Reporting Requirements  |
|------------------------------|---|
| Principal Investigative Site | Must be reported according to the rules of the respective Ethics Committee  |
| EC                           | <p>Report of the adverse event to the site's Institutional Review Board is the responsibility of the Principal Investigator.</p> <p>The investigator is responsible for reporting such events to their EC within 10 working days of knowledge of the event.</p> <p>Adverse events clearly unrelated to the device (e.g., broken limb, malignancy) may be reported in accordance with institutional requirements and recorded on CRFs as appropriate</p> |

Details are found in Medical Event Report Form "MERF" below.

**MERF** The table below describes the information required on the initial and final MERF reports.

| Information   | Initial | Final |

## Data Collection

Data will be entered according to the source documents into an electronic database (online).

## Statistical Analysis Plan

**Special Requirements and Procedures**

A ring binder with one Source Document Form (SDF) could be provided to each participating site. Below are the guidelines for SDF completion and conclusion.

**Source document forms**

| <b>Item</b> | <b>Instruction</b>  |
|-------------|---|
| 1           | Data entry via a secure data line to a centralized independent database                         |
| 2           | Maintain each SDF and all relevant source documentation in the appropriate individual notebook. |
| 3           | Complete SDF or type.   |
| 4           | Cross out erroneous entries with a single line, initial and date, and record the correct entry. |

**Source documents**

Copies of pertinent records (i.e., source documents, patient charts, laboratory data, etc.) in connection with the registry not included in the notebook will be made available on request with due diligence toward protecting the privacy of the subject.

**Disclosure of data**

All information obtained during the conduct of this registry will be regarded as confidential. Manuscripts prepared for publication will be submitted to a steering committee/principal investigator, mutually agreed upon by participating sites, for review and comments prior to submission to the publisher. This condition should not be construed as a means of restricting publication but is intended solely to assure mutual concurrence regarding data, evaluations, and conclusion, to provide an opportunity to share with the investigator any new and/or unpublished information of which he/she may be unaware, and to assure regulatory compliance of the results presented.

**EC**

This protocol and the patient consent form will be reviewed and approved by the Ethics Committee (EC).

**Informed consent**

It is the responsibility of the institution to ensure compliance with relevant regulation regarding sharing personal health information during the course of this research. Written informed consent is required prior to enrollment in the registry. It is the responsibility of the investigator to obtain that consent.

**Acknowledgement**

The Principal Investigator understands and acknowledges that any industry personnel such as those from Topera without appropriate medical training and/or licensure shall not directly participate in the procedure. Such individuals may be present, at the discretion of the physician, solely as advisors and/or observers. Advice shall be contained to the operation, function, and/or maintenance of the equipment and/or software. Any and all medical decisions regarding patient care and treatment shall solely be the responsibility of the Principal Investigator.

|                                 |  |
|---------------------------------|--|
| <b>Document retention</b>       | The investigator must retain the registry data for a time period required by the current guidelines unless other rules require a longer retention period.  |
| <b>Additional consideration</b> | The registry procedure will be carried out in a manner consistent with local procedure standard and with current contractual agreements between each individual site Principal Investigator and their associated educational and medical institutions. |
|                                 | The site Principal Investigator shall strictly adhere to clinical standards defined by the guidelines of the European and German societies.  |
