	STUDY PROTOCOL		
	Study Protocol No.: SLS-BE-0145-25-CREN	Version No: 01	Date: 21 Jan 26
	Single ascending dose (SAD) study with Dose Linearity of Eicosapentaenoic Acid (EPA) and Calcium L-5-Methyltetrahydrofolate (L-5-MTHF) following oral administration of different dose levels of CreNeuroS [®] CNS Fish Oil Plus Softgels under fasting condition.		

1. PROTOCOL SUMMARY

Study Title	An Open-Label, Balanced, Randomized, Single Ascending Dose Study, To Evaluate The Pharmacokinetic Dose Linearity of Eicosapentaenoic Acid (EPA) and Calcium L-5-Methyltetrahydrofolate (L-5-MTHF) Following Oral Administration Of Different Dose Levels of Crenueros [®] CNS Fish Oil Plus Softgels Supplied By Sichuan Credit Pharmaceutical Co., Ltd, China in Healthy Subjects Under Fasting Conditions.		
Investigational Medicinal Products	Test Product (T):	CreNeuroS [®] CNS Fish Oil Plus Softgels Supplied by Sichuan Credit Pharmaceutical Co., Ltd, China. Each softgel contains, Eicosapentaenoic Acid (EPA) (as EE) 400 mg; Calcium L-5-Methyltetrahydrofolate 3.75 mg and other Vitamins and Minerals.	
Objectives	Primary Objective:	<ul style="list-style-type: none">• To assess the Pharmacokinetic profile of single ascending doses of Eicosapentaenoic Acid (EPA) and Calcium L-5-Methyltetrahydrofolate (L-5-MTHF) after administration of CreNeuroS[®] CNS Fish Oil Plus Softgels in healthy subjects under fasting condition.• To demonstrate dose linearity of Eicosapentaenoic Acid (EPA) and Calcium L-5-Methyltetrahydrofolate (L-5-MTHF) following single dose administration (different doses) of CreNeuroS[®] CNS Fish Oil Plus Softgels in healthy subjects under fasting condition. Secondary objective: To evaluate the safety and tolerability of single ascending doses (different doses) of CreNeuroS [®] CNS Fish Oil Plus Softgels in healthy subjects under fasting condition.

	SLS-BE-0145-25-CREN	01	21 Jan 26

Single ascending dose (SAD) study with Dose Linearity of Eicosapentaenoic Acid (EPA) and Calcium L-5-Methyltetrahydrofolate (L-5-MTHF) following oral administration of different dose levels of CreNeuroS[®] CNS Fish Oil Plus Softgels under fasting condition.

	be at the check-out day of the previous group to ensure the subject's safety.
Restriction during the study	<p>The subjects will fast for at least 08.00 hours prior to dosing and 04.00 hours post-dose.</p> <p>In study period, drinking water will be restricted from at least 01.00 hour prior to dosing until 01.00 hours post-dose except 240 mL of drinking water during dosing. After 01.00 hours post dose, drinking water will be provided <i>ad libitum</i>.</p> <p>Subjects will remain in the sitting position for at least 04.00 hours of post-dose and only necessary movement will be allowed during this period. Thereafter, subjects will be allowed to move freely during the remaining part of the study. However, they will not be allowed to take part in any kind of strenuous exercise/activity.</p> <p>Note: Subjects' diet from at least 48.00 hours pre-dose and at least 72.00 hours post dose will be controlled. The meals during the diet control period should be eicosapentaenoic acid and folate limited.</p>
Blood Sample Handling Procedure and Time Points	<p>Blood sample will be drawn through an intravenous cannula inserted in a superficial forearm vein of the subject. The cannula will be kept in situ up to 24.00 hours post dose or as per subjects convenience.</p> <p>A total of 36 blood samples will be collected in study period (including pre-dose sample). The pre-dose (-24.00, -12.00, -01.00, -00.50 and 00.00 hour) blood sample 08 mL will be collected within 10 minutes prior to dosing. Post dose blood samples 08 mL will be collected at 00.25, 00.50, 00.75, 01.00, 01.25, 01.50, 01.75, 02.00, 02.50, 03.00, 04.00, 05.00, 06.00, 06.50, 07.00, 07.50, 08.00, 08.50, 09.00, 10.00, 12.00, 16.00, 24.00, 48.00, 72.00 hours respectively (+02 minutes allowed for in house). (120.00, 168.00, 240.00, 312.00, 384.00 and 432.00 hours samples will be collected on ambulatory basis (±60 minutes)). All samples will be collected in pre-labeled K₂EDTA– vacutainers from a forearm vein using an indwelling cannula as per the discretion of the investigator. Heparin-lock technique will be used to</p>
