

## **Research Study Informed Consent Document**

**Study Title for Participants:** Testing Nivolumab and Ipilimumab with Short-Course Radiation in Advanced Rectal Cancer

**Official Study Title for Internet Search on**  
<http://www.ClinicalTrials.gov>: EA2201, “A Phase II Study of Neoadjuvant Nivolumab plus Ipilimumab and Short-Course Radiation in MSI-H/dMMR Locally Advanced Rectal Adenocarcinoma” (NCT04751370)

Version Date: November 1, 2024

### **Overview and Key Information**

#### **What am I being asked to do?**

We are asking you to take part in a research study. This study has public funding from the National Cancer Institute (NCI), part of the National Institutes of Health (NIH) in the United States Department of Health and Human Services. We do research studies to try to answer questions about how to prevent, diagnose, and treat diseases like cancer.

We are asking you to take part in this research study because you have locally advanced rectal cancer.

#### **Taking part in this study is your choice.**

You can choose to take part or you can choose not to take part in this study. You also can change your mind at any time. Whatever choice you make, you will not lose access to your medical care or give up any legal rights or benefits.

This document has important information to help you make your choice. Take time to read it. Talk to your doctor, family, or friends about the risks and benefits of taking part in the study. It's important that you have as much information as you need and that all your questions are answered. See the “Where can I get more information?” section for resources for more clinical trials and general cancer information.

#### **Why is This Study Being Done?**

This study is being done to answer the following question:

Can we lower the chance of your rectal cancer growing or spreading by giving you nivolumab and ipilimumab, with consideration of short-course radiation and surgery only if needed?

We are doing this study because we want to find out if this approach is better or worse than the usual approach for your locally advanced rectal cancer. The usual approach is defined as care most people get for locally advanced rectal cancer.

## **What is the usual approach to my locally advanced rectal cancer?**

The usual approach for patients who are not in a study is either treatment with radiation, surgery and chemotherapy, or treatment with single agent immunotherapy for six months. For patients who get the usual approach for this cancer, about 27 to 100 out of 100 achieve a pathologic complete response (no residual cancer at the time of surgery) or clinical complete response (no residual cancer on endoscopy and imaging).

## **What are my choices if I decide not to take part in this study?**

- You may choose to have the usual approach described above.
- You may choose to take part in a different research study, if one is available.
- You may choose not to be treated for cancer.
- You may choose to only get comfort care to help relieve your symptoms and not get treated for your cancer.

## **What will happen if I decide to take part in this study?**

If you decide to take part in this study, you will get immunotherapy with nivolumab and ipilimumab for four 28 day cycles. You will then have restaging with a digital rectal exam (DRE), flexible sigmoidoscopy, CT scan and magnetic resonance imaging (MRI). If you have had a clinical complete response and no tumor remains, you can receive nonoperative management (no surgery) and continue close surveillance. If you have not had a clinical complete response to immunotherapy (i.e., tumor remains after nivolumab/ipilimumab treatment), you will then be treated with an additional two monthly cycles of nivolumab immunotherapy per current national guidelines recommending up to 6 months of total immunotherapy. You will then have restaging with a digital rectal exam (DRE), flexible sigmoidoscopy, CT scan and magnetic resonance imaging (MRI). If you have not had a clinical complete response to immunotherapy (i.e., tumor remains after six months of immunotherapy), you will then be treated with short-course radiotherapy and then total mesorectal excision (TME) if needed (i.e., tumor still remains).

Your doctor will continue to follow your condition closely for at least five years and watch you for side effects and disease recurrence. You will be followed in the clinic with blood tests every 3 months for 2 years and then every 6 months for 3 additional years, CT/MRI scans at least annually for 5 years, and colonoscopy one year after surgery and periodically (every 3-5 years) after that. If you do not have surgery, you will also have DRE and endoscopy every 3-4 months for the first 2 years, then every 6 months for a total of 5 years,

as well as an MRI every 6 months for at least 3 years. Your condition will be followed for a total of 5 years, or longer if needed.

## **What are the risks and benefits of taking part in this study?**

There are both risks and benefits to taking part in this study. It is important for you to think carefully about these as you make your decision.

### **Risks**

We want to make sure you know about a few key risks right now. We give you more information in the “What risks can I expect from taking part in this study?” section.

If you choose to take part in this study, there is a risk that this study approach may not be as good at shrinking and/or preventing your cancer from coming back as the usual approach for your cancer.

There is also a risk that you could have side effects from the immunotherapy drugs nivolumab and ipilimumab. These side effects may be worse and may be different than you would get with the usual approach for your cancer.

Some of the most common side effects that the study doctors know about are:

- Fatigue
- Thyroid problems, where your thyroid hormone could become too low or too high
- Diarrhea
- Shortness of breath
- Diabetes

There may be some risks that the study doctors do not yet know about.

### **Benefits**

This immunotherapy has shrunk or stabilized your type of cancer in a limited number of people with your cancer. It is unlikely that it will work in everyone with your cancer. This study may help the study doctors learn things that may help other people in the future.

## **If I decide to take part in this study, can I stop later?**

Yes, you can decide to stop taking part in the study at any time.

If you decide to stop, let your study doctor know as soon as possible. It’s important that you stop safely. This may mean slowly stopping the study drugs so that there is not a sudden unsafe change or risk to your health. If you stop, you can decide if you want to keep letting the study doctor know how you are doing.

Your study doctor will tell you about new information or changes in the study that may affect your health or your willingness to continue in the study.

## **Are there other reasons why I might stop being in the study?**

Yes. The study doctor may take you off the study if:

- Your health changes and the study is no longer in your best interest.
- New information becomes available and the study is no longer in your best interest.
- You do not follow the study rules.
- For women: You become pregnant while on the study.
- The study is stopped by the Institutional Review Board (IRB), Food and Drug Administration (FDA), or study sponsor (National Cancer Institute). The study sponsor is the organization who oversees the study.

**It is important that you understand the information in the informed consent before making your decision.** Please read, or have someone read to you, the rest of this document. If there is anything you don't understand, be sure to ask your study doctor or nurse.

## **What is the purpose of this study?**

The purpose of this study is to test the good and bad effects of the drugs called nivolumab and ipilimumab. Nivolumab and ipilimumab in combination with possible short-course radiation could shrink your cancer, but it could also cause side effects, which are described in the risks section below. The study doctors hope to learn if the study drugs will cause fewer cancer cells to be found at surgery than would normally be found after chemoradiation and/or chemotherapy, or if you can avoid surgery altogether if you have a clinical complete response to immunotherapy.

There will be about 31 people taking part in this study.

## **What are the study groups?**

In this study, you will receive the study drugs nivolumab and ipilimumab. You will receive treatments of nivolumab and ipilimumab through a vein in the arm or through a port every 28 days (1 cycle) for 4 cycles; if tumor remains, this will be followed by an additional two monthly cycles of nivolumab; if tumor still remains, this will be followed by 5 days of radiation. If tumor remains, you will then undergo surgical resection of your cancer, which is called total mesorectal excision (TME). If no tumor remains after immunotherapy treatment, you can proceed to nonoperative management and may not need either radiation or surgery.

## **What exams, tests, and procedures are involved in this study?**

Before you begin the study, your doctor will review the results of your exams, tests, and procedures. This helps your doctor decide if it is safe for you to take part in the study. If you join the study, you will have more exams, tests, and procedures to closely monitor your safety and health. Most of these are included in the usual care you would get even if you were not in a study.

These exams, tests, and procedures to monitor your safety and health include:

- Physical exams done at the beginning of each cycle
- Blood counts done before each treatment cycle
- CT Scans
- MRIs
- Sigmoidoscopies with biopsy and digital rectal exams

## **What risks can I expect from taking part in this study?**

### **General Risks**

If you choose to take part in this study, there is a risk that the study drugs may not be as good as the usual approach for your cancer at shrinking or stabilizing your cancer.

You also may have the following discomforts:

- Spend more time in the hospital or doctor's office.
- Be asked sensitive or private questions about things you normally do not discuss.
- May not be able to take part in future studies.

The nivolumab and ipilimumab used in this study could be very harmful to an unborn or newborn baby. There may be some risks that doctors do not yet know about. It is very important that you check with your study doctor about what types of birth control or pregnancy prevention to use during the study and for 5 months after you have completed the study (for female patients) and 7 months after you have completed this study (for male patients).

### **Side Effect Risks**

The immunotherapy used in this study may affect how different parts of your body work such as your liver, kidneys, heart, and blood. The study doctor will test your blood and let you know if changes occur that may affect your health.

There is also a risk that you could have other side effects from the study drugs.

Here are important things to know about side effects:

1. The study doctors do not know who will or will not have side effects.
2. Some side effects may go away soon, some may last a long time, and some may never go away.
3. Some side effects may make it hard for you to have children.
4. Some side effects may be mild. Other side effects may be very serious and even result in death.

You can ask your study doctor questions about side effects at any time. Here are important ways to make side effects less of a problem:

- If you notice or feel anything different, tell your study doctor. He or she can check to see if it is a side effect.
- Your study doctor will work with you to treat your side effects.

- Your study doctor may adjust the study drugs to try to reduce side effects.

## Drug Risks

The tables below show the most common and most serious side effects doctors know about. Keep in mind that there might be other side effects doctors do not yet know about. If important new side effects are found, the study doctor will discuss these with you.

**Study Group** – Patients who are in this study may experience the side effects of nivolumab and ipilimumab as listed below:

## Possible Side Effects of BMS-936558 (Nivolumab)

(CAEPR Version 2.5, June 10, 2023)

<b>Special precautions</b> Side effects of Nivolumab may happen anytime during treatment or even after your treatment has ended. Some of these problems may happen more often when Nivolumab is used in combination with ipilimumab. <b>Call or see your healthcare provider right away if you develop any problems listed below or the symptoms get worse.</b>
<b>COMMON, SOME MAY BE SERIOUS</b> In 100 people receiving Nivolumab, more than 20 and up to 100 may have:
<ul style="list-style-type: none"><li>• Tiredness</li></ul>

<b>OCCASIONAL, SOME MAY BE SERIOUS</b> In 100 people receiving Nivolumab, from 4 to 20 may have:
<ul style="list-style-type: none"><li>• Anemia which may require blood transfusion</li><li>• Swelling and redness of the eye</li><li>• Pain</li><li>• Diarrhea, nausea</li><li>• Dry mouth</li><li>• Fever</li><li>• Swelling and redness at the site of the medication injection</li><li>• Bruising, bleeding</li><li>• Pain or swelling of the joints</li><li>• Loss of appetite</li><li>• Reaction during or following a drug infusion which may cause fever, chills, rash</li></ul> <p>Nivolumab may cause your immune system to attack normal organs and cause side effects in many parts of the body. These problems may include but are not limited to:</p> <ul style="list-style-type: none"><li>• Lung problems (pneumonitis and pleural effusion). Symptoms may include: new or worsening cough, chest pain, shortness of breath.</li></ul>

### **OCCASIONAL, SOME MAY BE SERIOUS**

In 100 people receiving Nivolumab, from 4 to 20 may have:

- Intestinal problems (colitis) that can rarely lead to tears or holes in your intestine. Signs and symptoms of colitis may include: diarrhea or increase in bowel movements, blood in your stools or dark, tarry, sticky stools, severe belly pain or tenderness.
- Skin: itching; rash, blisters including inside the mouth; loss of skin pigment
- Liver problems (hepatitis) which can cause liver failure. Signs and symptoms of hepatitis may include: yellowing of your skin or the whites of your eyes, severe nausea or vomiting; drowsiness; pain in the right upper belly
- Hormone gland problems (especially the thyroid, pituitary and adrenal glands, and pancreas). Signs and symptoms may include: headaches that will not go away or unusual headaches, extreme tiredness or changes in mood or behavior; decreased sex drive; weight loss or weight gain; excessive thirst or urine; dizziness or fainting.

### **RARE, AND SERIOUS**

In 100 people receiving Nivolumab, 3 or fewer may have:

- Swelling of arms and legs which may cause a feeling of heaviness and tightness
- Dry eyes
- Sores in the mouth which may cause difficulty swallowing
- A syndrome starting with flu-like symptoms and followed by swelling, tenderness which may cause flu-like symptoms, blurred vision, ringing in the ears, changes in hair or hair loss
- Swelling of the bowels

Nivolumab may cause your immune system to attack normal organs and cause side effects in many parts of the body. These problems may include but are not limited to:

- Visual disturbances which may cause double vision, blurred vision, or loss of vision with a chance of blindness
- A condition with high blood sugar which leads to tiredness, frequent urination, excessive thirst, headache, nausea and vomiting, and can result in coma
- Kidney problems, including nephritis and kidney failure requiring dialysis. Signs of kidney problems may include: decrease in the amount of urine, blood in your urine, ankle swelling.
- Heart problems including swelling and heart failure. Symptoms and signs of heart problem may include: Shortness of breath, swelling of the ankle and body.
- Problem of the muscle, including swelling, which can cause muscle pain and severe muscle weakness sometimes with dark urine
- Swelling of the brain (meningitis/encephalitis) which may cause: headache, stiff neck confusion, sleepiness, seizures or injury to the brain which may cause headache, seizure, blindness (also known as Reversible Posterior Leukoencephalopathy Syndrome)

<b>RARE, AND SERIOUS</b>
In 100 people receiving Nivolumab, 3 or fewer may have:
<ul style="list-style-type: none"> <li>• Problem of the nerves that can cause paralysis. Signs and symptoms may include: numbness, tingling of hands and feet; weakness of the arms, legs and facial muscle movement</li> <li>• Allergic reaction which may cause rash, low blood pressure, wheezing, shortness of breath, swelling of the face or throat</li> <li>• Complications associated with stem cell transplant using donor stem cells (allogeneic stem cell transplant). These complications are caused by attack of donor cells on the host organs (inducing liver, skin and gut damage), and can lead to death. If you are considering an allogeneic stem transplant after participating in this study, please tell your doctor that you have received Nivolumab therapy, since the risk and severity of transplant-associated complications may be increased.</li> </ul>

### Possible Side Effects of Ipilimumab (MDX-010)

(Table Version Date: March 29, 2020)

<b>Special precautions</b> Side effects of ipilimumab (MDX-010) may happen anytime during treatment or even after your treatment has ended. Some of these problems may happen more often when ipilimumab (MDX-010) is used in combination with BMS-936558 (nivolumab). <b>Call or see your healthcare provider right away if you develop any problems listed below or the symptoms get worse.</b>
<b>COMMON, SOME MAY BE SERIOUS</b>
In 100 people receiving ipilimumab (MDX-010), more than 20 and up to 100 may have:
<ul style="list-style-type: none"> <li>• Diarrhea, nausea</li> <li>• Tiredness</li> </ul> <p>Ipilimumab (MDX-010) may cause your immune system to attack normal organs and cause side effects in many parts of the body. These problems may include but are not limited to:</p> <ul style="list-style-type: none"> <li>• Skin: itching; rash, blisters including inside the mouth (can be severe); hives</li> </ul>

<b>OCCASIONAL, SOME MAY BE SERIOUS</b>
In 100 people receiving ipilimumab (MDX-010), from 4 to 20 may have:
<ul style="list-style-type: none"> <li>• Abnormal heartbeat</li> <li>• Hearing loss</li> <li>• Swelling and redness of the eye</li> <li>• Pain</li> <li>• Difficulty swallowing, eating</li> <li>• Constipation, vomiting</li> </ul>

### **OCCASIONAL, SOME MAY BE SERIOUS**

In 100 people receiving ipilimumab (MDX-010), from 4 to 20 may have:

- Weight loss, loss of appetite
- Fever
- Dehydration
- Pain or swelling of the joints
- Reaction during or following a drug infusion which may cause fever, chills, rash
- Low blood pressure which may cause feeling faint

Ipilimumab (MDX-010) may cause your immune system to attack normal organs and cause side effects in many parts of the body. These problems may include but are not limited to:

- Lung problems (pneumonitis). Symptoms may include: new or worsening cough, chest pain, shortness of breath
- Intestinal problems (colitis) that can rarely lead to tears or holes in your intestine. Signs and symptoms of colitis may include: diarrhea or increase in bowel movements, blood in your stools or dark, tarry, sticky stools, severe belly pain or tenderness
- Kidney problems, including nephritis and kidney failure requiring dialysis. Signs of kidney problems may include: decrease in the amount of urine, blood in your urine, ankle swelling.
- Problem of the muscle, including inflammation, which can cause muscle pain and severe muscle weakness sometimes with dark urine
- Problem of the nerves that can cause paralysis. Signs and symptoms may include: numbness, tingling of hands and feet; weakness of the arms, legs and facial muscle movement.
- Liver problems (hepatitis) which can cause liver failure. Signs and symptoms of hepatitis may include: yellowing of your skin or the whites of your eyes, severe nausea or vomiting; drowsiness; pain in the right upper belly
- Hormone gland problems (especially the thyroid, pituitary and adrenal glands, and pancreas). Signs and symptoms may include: headaches that will not go away or unusual headaches, extreme tiredness or changes in mood or behavior decreased sex drive; weight loss or weight gain; excessive thirst or urine; dizziness or fainting.

### **RARE, AND SERIOUS**

In 100 people receiving ipilimumab (MDX-010), 3 or fewer may have:

- Bleeding
- Blockage of the bowels which may cause constipation
- Fluid around heart
- Severe illness with multiorgan failure
- Confusion

Ipilimumab (MDX-010) may cause your immune system to attack normal organs and cause side

<b>RARE, AND SERIOUS</b>
In 100 people receiving ipilimumab (MDX-010), 3 or fewer may have:
effects in many parts of the body. These problems may include but are not limited to:
<ul style="list-style-type: none"><li>• A condition with high blood sugar which leads to tiredness, frequent urination, excessive thirst, headache, nausea and vomiting, and can result in coma</li><li>• Heart problems including inflammation and heart failure. Symptoms and signs of heart problem may include: Shortness of breath, swelling of the ankle and body</li><li>• Complications associated with stem cell transplant using donor stem cells (allogeneic stem cell transplant). These complications are caused by attack of donor cells on the host organs (inducing liver, skin and gut), and can lead to death. If you are considering an allogeneic stem transplant after participating in this study, please tell your doctor that you have received ipilimumab therapy, since the risk and severity of transplant-associated complications may be increased.</li><li>• Swelling of the brain (meningitis/encephalitis), which may cause: headache, confusion, sleepiness, seizures, and stiff neck</li></ul>

### **Additional Drug Risks**

Rarely, there are problems getting enough supplies of the study drug. If that happens, your doctor will talk with you about your options.

### **Possible Side Effects of Radiation Therapy**

<b>COMMON, SOME MAY BE SERIOUS</b>
In 100 people receiving radiation therapy, more than 20 and up to 100 may have:
<ul style="list-style-type: none"><li>• Reddening, tanning, or peeling of the skin</li><li>• Mild pain</li><li>• Hair loss</li><li>• Tiredness</li><li>• Diarrhea, nausea</li><li>• Anemia, which may require transfusion</li><li>• Infection, especially when white blood cell count is low</li></ul>

<b>OCCASIONAL, SOME MAY BE SERIOUS</b>
In 100 people receiving radiation therapy, from 4 to 20 may have:
<ul style="list-style-type: none"><li>• Thickening and numbness of the skin</li><li>• Sores or ulcers on the skin or near the cancer location</li><li>• Permanent hair loss</li><li>• Bleeding from the skin</li><li>• Sores in mouth which may cause difficulty swallowing</li></ul>

<b>RARE, AND SERIOUS</b>
In 100 people receiving radiation therapy, 3 or fewer may have:
<ul style="list-style-type: none"><li>• Damage to internal organs</li><li>• Abnormal opening in internal organs which may cause pain and bleeding</li></ul>

## What are my responsibilities in this study?

If you choose to take part in this study you will need to:

- Keep your study appointments.
- Tell your doctor about:
  - all medications and supplements you are taking
  - any side effects
  - any doctors' visits or hospital stays outside of this study
  - if you have been or are currently in another research study.

**For women:** Do not get pregnant or breastfeed while taking part in this study. **For men:** Do not father a baby while taking part in this study. **For all:** Tell your study doctor right away if you think that you or your partner have become pregnant during the study or within 5 months after your last dose of study drug.

Women of childbearing potential (WOCBP) receiving nivolumab must continue contraception for a period of 5 months after the last dose of nivolumab.

## What are the costs of taking part in this study?

You and/or your insurance plan will need to pay for the costs of medical care you get as part of the study, just as you would if you were getting the usual care for your cancer. This includes:

- the costs of tests (for example: pregnancy tests), exams, and procedures that you get during the study to monitor your safety, and prevent and treat side effects.
- The costs of getting the nivolumab and ipilimumab ready and giving it to you.
- Your insurance co-pays and deductibles.

Talk to your insurance provider and make sure that you understand what your insurance pays for and what it doesn't pay for if you take part in this clinical trial. Also, find out if you need approval from your plan before you can take part in the study.

Ask your doctor or nurse for help finding the right person to talk to if you are unsure which costs will be billed to you or your insurance provider.

You or your insurance provider will not have to pay for the nivolumab and ipilimumab while you take part in this study. However, patient/insurance company will be billed for the costs of the preparation and administration of the study drugs.

Taking part in this study may mean that you need to make more visits to the clinic or hospital than if you were getting the usual approach to treat your cancer. You may:

- Have more travel costs.
- Need to take more time off work.
- Have other additional personal costs.

You will not be paid for taking part in this study. The research may lead to new tests, drugs, or other products for sale. If it does, you will not get any payment.

## **What happens if I am injured because I took part in this study?**

If you are injured as a result of taking part in this study and need medical treatment, please talk with your study doctor right away about your treatment options. The study sponsors will not pay for medical treatment for injury. Your insurance company may not be willing to pay for a study-related injury. Ask them if they will pay. If you do not have insurance, then you would need to pay for these medical costs.

If you feel this injury was caused by medical error on the part of the study doctors or others involved in the study, you have the legal right to seek payment, even though you are in a study. Agreeing to take part in this study does not mean you give up these rights.

## **Who will see my medical information?**

Your privacy is very important to us. The study doctors will make every effort to protect it. The study doctors have a privacy permit to help protect your records if there is a court case. However, some of your medical information may be given out if required by law. If this should happen, the study doctors will do their best to make sure that any information that goes out to others will not identify who you are.

Some of your health information, such as your response to cancer treatment, results of study tests, and medicines you took, will be kept by the study sponsor in a central research database. However, your name and contact information will not be put in the database. If information from this study is published or presented at scientific meetings, your name and other personal information will not be used.

There are organizations that may look at or receive copies of some of the information in your study records. Your health information in the research database also may be shared with these organizations. They must keep your information private, unless required by law to give it to another group.

Some of these organizations are:

- The study sponsor and any company supporting the study now or in the future. This would include any organization helping the company with the study.
- The NCI Central IRB, which is a group of people who review the research with the goal of protecting the people who take part in the study.
- The FDA and the groups it works with to review research.
- The NCI and the groups it works with to review research.

- The NCI's National Clinical Trials Network and the groups it works with to conduct research including the Imaging and Radiation Oncology Core (IROC).

In addition to storing data in the study database, data from studies that are publicly funded may also be shared broadly for future research with protections for your privacy. The goal of this data sharing is to make more research possible that may improve people's health. Your study records may be stored for future use in public databases. However, your name and other personal information will not be used.

Some types of future research may include looking at your information and information from other patients to see who had side effects across many studies or comparing new study data with older study data. However, right now we don't know what research may be done in the future using your information. This means that:

- You will not be asked if you agree to take part in the specific future research studies using your health information.
- You and your study doctor will not be told when or what type of research will be done.

## Where can I get more information?

You may visit the NCI web site at <http://cancer.gov/> for more information about studies or general information about cancer. You may also call the NCI Cancer Information Service to get the same information at: 1-800-4-CANCER (1-800-422-6237).

A description of this clinical trial will be available on <http://www.ClinicalTrials.gov>, as required by U.S. Law. This Web site will not include information that can identify you. At most, the Web site will include a summary of the results. You can search this Web site at any time.

You can talk to the study doctor about any questions or concerns you have about this study or to report side effects or injuries. Contact the study doctor (\*insert name of study doctor[s]\*) at (\*insert telephone number, and email address if appropriate\*).

For questions about your rights while in this study, call the (\*insert name of organization or center\*) Institutional Review Board at (\*insert telephone number\*).

## **Optional studies that you can choose to take part in.**

This part of the consent form is about optional studies that you can choose to take part in. They are separate from the main study described above. These optional studies will not benefit your health. The researchers leading these optional studies hope the results will help other people with cancer in the future. The results will not be added to your medical records and you or your study doctor will not know the results.

Taking part in these optional studies is your choice. You can still take part in the main study even if you say “no” to any or all of these studies. There is no penalty for saying “no.” You and your insurance company will not be billed for these optional studies. If you sign up for, but cannot complete any of these studies for any reason, you can still take part in the main study.

Circle your choice of “yes” or “no” for each of the following studies.

### **Known future studies**

If you choose to take part in this optional study, we would like to collect tissue from your surgery and blood samples for research studies. The samples will be used by researchers to learn about how the study treatment affects your cancer.

### **Unknown future studies**

If you choose to take part in this optional study, researchers are also requesting that you allow the storage of leftover tissue and blood samples for banking for future research projects. Storing samples for future studies is called ‘bio-banking.’ The biobank is being run by ECOG-ACRIN and is supported by the NCI.

This is a publicly funded study. Samples from publicly funded studies are required to be shared as broadly as possible. However, we will protect your privacy. The goal of this is to make more research possible that may improve people’s health.

The biobank is a public research resource. It has controlled access. This means that researchers who want to get samples and data from it must submit a specific research request. The request identifies who they are and what their planned research project is. Before getting the samples and data, the researchers must agree to keep the data private, only use it for their planned research project, and never use it to try to identify you. Also, any health-related information, such as your response to cancer treatment, results of study tests, and medicines you took, will be stored for future use.

Right now, we don’t know what research may be done in the future using your samples. This means that:

- You will not be asked if you agree to take part in the future research studies.
- You and your study doctor will not be told when or what type of research will be done.
- You will not get reports or other information about any research that is done using your samples.

Unknown future research studies may include sequencing of all or part of your DNA. This is called genomic sequencing. Sequencing allows researchers to identify your genetic code.

Changes in your genetic code may just be in your tumor tissue. These are called somatic changes. Changes may also be in your normal tissue and passed down through your family. For example, these genetic changes may be passed down to your children in the same way that eye and hair color are passed down. These are called germline changes.

If only tumor tissue is sequenced, we will not know if a genetic change in your tumor is also in your normal tissue. This is why sometimes both normal tissue and tumor tissue are sequenced. This helps researchers understand if a genetic change happened only in your cancer tissue, or in your normal tissue as well.

### **What is involved in this optional sample collection?**

If you agree to take part, here is what will happen next:

1. An additional four (4) teaspoons of blood will be collected from a vein in your arm at the following time points: prior to starting immunotherapy treatment prior to every cycle of immunotherapy, at disease reassessment following immunotherapy treatment, prior to radiation treatment, prior to surgery, every 3 months after treatment completion for two years, and every 6 months for an additional 3 years. The blood will usually be collected at the same time as the blood collected for your clinical tests to monitor your health.
2. Some of the tumor that was collected at the time of your surgery will be sent to the biobank. No additional procedures will be done to obtain the tissue for research. There is no limit on the length of time we will keep your samples and research information. The samples will be kept until they are used for research or destroyed.
3. Researchers can only get samples from the biobank after their research has been approved by experts. Researchers will not be given your name or contact information.
4. Some of your genetic and health information may be placed in central databases for researchers to use. The databases will not include your name or contact information.

### **What are the risks in this optional sample collection?**

The most common risks related to drawing blood from your arm are brief pain and maybe a bruise.

Generally, hospitals will keep some of your tissue. This tissue may be used to help treat your cancer in the future. There is a small risk that when this tissue sample is submitted to the biobank for this optional sample collection, your tissue could be used up.

Your medical and genetic information is unique to you. There is a risk that someone outside of the research study could get access to your study records or trace information in a database back to you. They could use that information in a way that could harm you. Researchers believe the chance that someone could access and misuse your information is very small. However, the risk may increase in the future as people find new ways of tracing information.

In some cases, this information could be used to make it harder for you to get or keep a job and get or keep health insurance. There are laws against the misuse of genetic information, but they may not give full protection. For more information about the laws that protect you, ask your study doctor or visit: <https://www.genome.gov/10002328/>

### How will information about me be kept private?

Your privacy is very important to the study researchers and biobank. They will make every effort to protect it. Here are just a few of the steps they will take:

1. They will remove identifiers, such as your initials, from your sample and information. They will replace them with a code number. There will be a master list linking the code numbers to names, but they will keep it separate from the samples and information.
2. Researchers who study your sample and information will not know who you are. They also must agree that they will not try to find out who you are.
3. Your personal information will not be given to anyone unless it is required by law.
4. If research results are published, your name and other personal information will not be used.

### What are the benefits to taking part in this optional sample collection?

You will not benefit from taking part.

The researchers, using the samples from you and others, might make discoveries that could help people in the future.

### Are there any costs or payments to this optional sample collection?

There are no costs to you or your insurance. You will not be paid for taking part in this study. The research may lead to new tests, drugs, or other products for sale. If it does, you will not get any payment.

### What if I change my mind about this optional sample collection?

If you decide you no longer want your samples to be used, you can call the study doctor, (\*insert name of study doctor for main trial\*), at (\*insert telephone number of study doctor for main trial\*), who will let the biobank know. Then, any sample that remains in the biobank will be destroyed or returned to your study doctor. This will not apply to samples or related health information that have already been given to or used by researchers.

### What if I have questions about this optional sample collection?

If you have questions about the use of your samples for research, contact the study doctor, (\*insert name of study doctor for main trial\*), at (\*insert telephone number of study doctor for main trial\*).

Please circle your answer below to show if you would or would not like to take part in each optional study:

### Samples for known future studies:

*May we have samples of your blood for laboratory research studies?*

- I agree that my samples and related health information may be used for the laboratory research studies described above.

YES

NO

**Samples for unknown future studies:**

*May we keep any blood samples leftover after the laboratory research studies for future research?*

- My samples and related information may be kept in a Biobank for use in future health research.

YES

NO

**This is the end of the section about optional studies.**

### **My signature agreeing to take part in the study**

I have read this consent form or had it read to me. I have discussed it with the study doctor and my questions have been answered. I will be given a signed and dated copy of this form. I agree to take part in the main study.
