Community-Led COVID-19 Testing Intervention to Address Mistrust - Study 2, NCT07166770

Data Analysis Plan

Data will be cleaned and analyzed using SPSS. Data will be examined for baseline descriptives and evaluated to ensure assumptions of ANOVA are met. A series of mixed ANOVAs will be performed to examine changes from baseline to Time 2 and Time 3 between the intervention and control groups on openness to COVID-19 testing, perceived testing efficacy, trust in the safety of the COVID-19 vaccine, trust in vaccine efficacy, vaccine hesitancy, social connectedness, and health literacy.
