

## **Cover Page for Statistical Analysis Plan**

Sponsor-Investigator:	Marshall Holland
NCT Number:	NCT03539081
Unique Protocol ID:	201605777
Official Title:	Investigating Mechanisms of Human Spinal Cord Stimulation for Purpose of Treating Restless Leg Syndrome
Date of Document:	10 May 2023

Throughout the study, continuous measures are reported via means and standard deviations. Changes in femoral and brachial artery blood flow during SCS will be examined using two-way repeated measures ANOVA. Missing values for blood flow and MSNA variables will be imputed via marginal sums of squares using a general linear model approach. All analysis will be performed using SigmaPlot version 13.0 (Systat Software, Inc.), and p-values less than 0.05 will be considered statistically significant for all analyses.
