

Title: Radial Artery Vasodilation Heat Study

NCT: NCT03620383

Date: 8/27/2019

Statistical Analysis plan:

Statistical analysis will be performed using Stata v14.2 (StataCorp LLC, College Station, TX).

Categorical variables and numerical values will be reported as frequencies (percentage) and mean \pm standard deviation, and compared between two groups using the Chi² test and independent samples t-test, respectively. Trends in radial artery CSA will be compared between PaW and control groups using the repeated measure analysis of variance (rANOVA). P value < 0.05 was considered statistically significant in all analyses.
