

Cover Page for ClinicalTrials.gov Document: Statistical Analysis Plan

Title: Treatment of CNS Sarcoidosis With H.P. Acthar Gel (NCT02298491)

Date: 04-April-2026

Statistical Analysis Plan

Demographic and clinical characteristics will be summarized using descriptive statistics. An intention to treat analysis will be performed using t-tests or Mann-Whitney U tests, as appropriate, to compare measures between treatment and control groups and to compare measures obtained at baseline to those at specific follow-up time points. A p-value <0.05 will be considered statistically significant.
