Official Study Title: What makes people better at naming pictured objects?

NCT06405893

Document Date 2/15/22

Analyses and Predictions. Percent of trials with correct responses and mean response time for correctly produced names will be analyzed in separate 2 (age group: young vs. older adults) x 2 (condition: mindfulness vs. control) factorial ANOVAs, with appropriate follow-up tests if an interaction is significant. Predictions:

Version 1	Version 2
Interaction predicted such that young adults' correct responding and response times will be more improved than older adults' following the mindfulness exercise	Interaction predicted such that older adults' correct responding and response times will be more improved than young adults' following the mindfulness exercise
